**Sustainable molecular imaging solutions
for a resilient tomorrow**

NM/CT 870 CZT

Creating a more sustainable future requires we care for the planet and its inhabitants.

It is essential that we continue to drive progress toward early, precise, and accessible diagnosis and treatment of more patients. For the planet, it is critical that we do so with a reduced impact on precious and rare resources that are imperative to life. We believe that the advancement of precision health, greater digitization of healthcare, and increased access to quality care are fundamental to accomplishing this goal.

We support carbon policies that reduce greenhouse gas emissions and promote sustainable development. We are committed to achieving net zero by 2050 and are part of the UN-backed "Race to Zero," with a goal of reducing emissions based on the Paris Agreement. We've also set a public goal to achieve a 50% reduction in our own operational emissions by 2030. As a result of these efforts, we want to enable a more sustainable health system by addressing not only the environmental impacts of our products but also the challenges healthcare professionals and their patients face with resilient, digital options.

We are committed to achieving **net zero** emissions by 2050.

We've set a public goal of a **50% reduction** in our own operational emissions by 2030.

We deliver sustainable, intelligently efficient solutions for a resilient tomorrow.

Building a healthier world to help improve access to care and enable better patient outcomes.

Green
Using fewer resources for a healthier planet.

Digital
Transforming healthcare through innovation.

Resilience
Building flexibility and dependability across healthcare systems.

# NM/CT 870 CZT helps create a resilient tomorrow.

Our NM/CT 870 CZT SPECT/CT system and its services help ensure that radiology professionals and the patients they serve have the technology necessary to create a sustainable and resilient tomorrow.

Reducing environmental impact

- 90% of materials used in the system are recyclable.
- Compliance with IEC60601-1-9: Requirements for Environmentally Conscious Design
- Parts eligible for harvesting
- Waste management (WEEE passport)

Improving outcomes

- Improve imaging results by scanning in closer proximity to your patients.
- Provide more tolerable exams for greater patient comfort.
- Enhance productivity with simplified workflows for complex procedures.
Contributing to a healthier planet

More than half of the healthcare sector's climate footprint, approximately 53%, is attributable to energy use.[1] As a result, we have strengthened our commitment to environmentally conscious design and sustainable practices across our product manufacturing, sourcing, distribution, installation, and service operations. This includes improving energy efficiency, optimizing the use of limited or rare materials, providing digitally enabled and remote predictive and maintenance service throughout the product lifespan, and offering refurbishment and recycling options at the end of product life.

GE Healthcare environmental management system is ISO 14001 certified	Our production and service operations align to ISO 14001 standards.
We're committed to environmental product design	This product conforms with IEC60601-1-9:2007.

[1] Health care climate footprint report | Health Care Without Harm (noharm-uscanada.org)

Materials

GE Healthcare reviews the environmental aspects of the material supply used within our products to increase recyclability and decrease the use of hazardous substances, when possible.

Recyclable	
	We're committed to high recyclability of our products and reuse when possible.
	Materials are recycled according to the WEEE Passport.
	90% of materials used in the system are recyclable.

Packaging

GE Healthcare imaging equipment has a robust and multi-sourced supply chain for systems and spare parts across all product portfolios.

Improved packaging Packaging is a mixture of wood and corrugated cardboard. The package is fully recyclable.

Product utilization

Our imaging products are designed to help enable energy efficiency through dedicated features and advanced applications to reduce the environmental impact.

Ergonomically designed patient setup and positioning	Touch Ruler sets your scan range with a simple touch of the bedside ruler.
	Automatic Positioning delivers easy setup.
	Automatic Body Contouring is in all procedures.
Reduce staff burden	SmartConsole provides an all-digital workflow management solution for staff.
Guidance for product utilization	Instructions are provided for use of the equipment to minimize the environmental impact during installation, use, and operation.
Reduce energy consumption during use	System features standby mode for nuclear medicine gantry.
	Energy saving mode exists in Optima™ 540 CT.
Guidance for end of lifecycle	Equipment instructions are provided to minimize the environmental impact for disposal or recycling.

End of product life

We are increasingly putting our retired products' materials back into the supply chain to maximize efficient use and minimize unnecessary waste. This circularity model enables our imaging products to extend their clinical impact through longer lifespans while reducing the environmental footprint. Additionally, we offer our customers partnered support for upgrades and services throughout a product's lifespan to maintain optimal performance and help drive better patient outcomes.

Our refurbishment programs involve an extensive inspection and testing process, designed to bring equipment back to its original certified manufacturing specifications. If the system is not suitable for refurbishment, eligible parts are harvested for reuse after quality and performance testing, while the rest are returned to dedicated recycling facilities.

Product utilization (Cont.)

Power consumption	Standby: 1.6 kW
	Idle (no scan): 5.1 kW
	NM scan mode (data acquired during table motion): 7.2 kW
	NM scan (NM scan running, Rotation moving to next step): 8.9 kW
	Typical CT scan (CT Helical Scanning at 120 kV, 100 mA, 12 Second Scan, 1 seconds per revolution): 21.2 kW
	Low-dose CT scan-Q.AC (120 kV, 20 mA, 3 Second Scan, 1 seconds per revolution): 10.2 kW
	High-dose CT scan (120 kV, 350 mA, 3 Second Scan, 1 seconds per revolution): 68 kW
Parts harvesting and refurbishment options are provided to reduce waste and environmental impacts while extending imaging access to less advantaged regions.	CT and SPECT system parts are eligible for assessment through the refurbishment program, in which they are assessed for refurbishment, harvesting, or recycling at the appropriate time in the lifespan.[2]
	94–96% of most systems are reused, refurbished, or recycled, extending the lifetime of each product.
Waste reduction	This system is in accordance with Waste Electrical and Electronic Equipment (WEEE) regulations.

[2] Products within MR, CT, nuclear medicine, and PET/CT are eligible for refurbishment, although whether a system is actually refurbished versus harvested for parts or otherwise recycled or reused is dependent on the state of the system when GE Healthcare takes possession of it. Data on file.

GE Healthcare product stewardship commitment

For more than 20 years, GE Healthcare's GoldSeal program has played a vital role in reducing medical imaging equipment waste by promoting and enabling the reuse of equipment and parts from de-installed imaging systems. After undergoing an extensive inspection and testing process, GoldSeal equipment is refurbished to meet the original system specifications. Buyers of GoldSeal MRI, CT, or PET/CT products can save on the acquisition costs associated with buying new equipment. Machines deemed unsuitable for GoldSeal refurbishment are dismantled at end of life, and after successfully passing acceptance testing criteria, specific parts are harvested for reuse. Where harvesting is not appropriate, GE Healthcare recycles about 94–96% of most systems. In a typical year, GoldSeal refurbishes approximately 8,000 pieces of imaging machines and ultrasounds.

NEW PRODUCT PURCHASE OR LEASE

GOLDSEAL PROGRAM: LEASE RETURN PRODUCT OR BUYBACK
- Comprehensively refurbished and/or remanufactured
- Updated with new software
- Recertified following all FDA requirements
- Equipment backed with 1 year, same-as-new equipment warranty

RECLAIM FOR PARTS AND MATERIALS
Identify parts for refurbishing and/or repurpose

END OF LIFE
About 94–96% of most systems are recycled, substantially reducing the volume of waste en route to landfills.

Digitizing healthcare through transformative innovations for a resilient tomorrow

We are committed to investing in digital capabilities that help accelerate clinical decision making, optimize imaging operations, and drive efficiencies in exam workflows, all of which can improve patient outcomes. Enabling digital transformation will further enhance our predictive and maintenance service operations for the life of your products.

We are also dedicated to driving a more resilient and sustainable future in healthcare. Many factors, including the pandemic, climate-related weather disasters, and supply-chain issues amplified this need. Managing operations through these challenges requires resilience and perseverance.

Advancing clinical outcomes

Advanced applications and cutting-edge AI tools provide personalized data to drive actionable insights, helping healthcare professionals make fast, accurate clinical decisions for care pathways.

Gain actionable clinical insights quicker for earlier diagnosis	Continue your efforts to diagnose and stage disease earlier with improved small lesion detectability.[3]
Keep your imaging equipment up to date with advanced clinical applications	Powered by AI-based and/or Quantitative Xeleris™ V applications: Q.Lung AI, Q.Volumetrix AI, Q.Thera AI,[4] Q.Liver, Q.Brain, DaTQUANT
Help improve patient outcomes with improved image quality	Patient-centric detector design with 67% reduction in brain reach makes certain exams more tolerable, while helping to improve imaging results by scanning in closer proximity to your patients.
	CZT-powered detection for increases in sensitivity, spatial and energy resolution, and contrast to noise ratio, all enabling improvement in image quality.[5]
Drive advancements with precision health	NM/CT 870 CZT is a premium SPECT/CT with Theranostics imaging capabilities, enabling more personalized care for your patients.

[3] In clinical practice, the use of NM/CT 870 CZT with WEHR collimator may improve lesion detectability depending on the clinical task, patient size, anatomical location, and clinical practice. A consultation with a radiologist and a physicist should be made to determine the appropriate dose or scan time to obtain diagnostic image quality for the particular clinical task.
[4] Q.Thera AI is 510k-pending at the US-FDA. Not available for sale in the United States.
[5] NM/CT 870 CZT with WEHR collimator, as compared to NM 800 series systems with conventional NaI detection and LEHR collimator.

Optimizing imaging operations

Our AI-based and advanced digital solutions are designed to increase efficiencies across the radiology spectrum without increasing the administrative and training burden on radiologists and technologists.

Increase productivity and consistency	Save time and steps by remotely collaborating with a clinician mid-exam.
	Enhance productivity through simplified workflows for complex hybrid and quantitative procedures with SmartConsole.
	Easy-to-use interface helps your department operate efficiently.
Reduce downtime	Smart QC boosts system uptime.
Cybersecurity	GE Healthcare's Design Engineering Privacy and Security (DEPS) process follows GDPR, HIPAA, NIST 800-53, NIST 800-30, ISO 27001, and NIST CSF requirements.

Enabling intelligent exam workflows

Intelligent automation features help to drive consistency, enable fast, easy exams, and improve workflow with fewer resources, all while achieving similar or improved outcomes.

Reduce setup time	Touch Ruler sets your scan range with a simple touch of the bedside ruler.
	Automatic Positioning delivers easy setup.
Reduce exam time	Provide shorter, more tolerable exams for greater patient comfort with Evolution technology.[6]
Ease of use	Leverage remote collaboration, simplified workflows, and an easy-to-use user interface.
Cleanability	Our equipment is designed to be cleaned and disinfected easily. We continue to test and approve new cleaning and disinfecting agents. Visit *Cleaning.GEHealthcare.com* for updates.

[6] In clinical practice, Evolution Options[6a] (Evolution for Bone, Evolution for Cardiac, Evolution for Bone Planar) and Evolution Toolkit[6b] are recommended for use following consultation of a nuclear medicine physician, physicist, and/or application specialist to determine the appropriate dose or scan time reduction to obtain diagnostic image quality for a particular clinical task, depending on the protocol adopted by the clinical site.
[6a] Evolution Options—Evolution claims are supported by simulation of count statistics using default factory protocols and imaging of 99mTc based radiotracers with LEHR collimator on anthropomorphic phantom or realistic NCAT—SIMSET phantom followed by quantitative and qualitative images comparison.
[6b] Evolution Toolkit—Evolution Toolkit claims are supported by simulation of full count statistics using lesion simulation phantom images based on various radiotracers and collimators and by showing that SPECT image quality reconstructed with Evolution Toolkit provide equivalent clinical information but have better signal-to-noise, contrast, and lesion resolution compared to the images reconstructed with FBP/OSEM.

Building a healthy world to help enable better patient outcomes.

GE Healthcare is a member of COCIR, the European Trade Association representing the medical imaging, radiotherapy, health ICT, and electromedical industries.[7]
