Imaging Systems Risk Assessment
## Your first step in protecting your high value medical assets

An optimized and secured clinical network mitigates risk and protects hospital operations, medical devices, sensitive data and patients.

Let us help you get started:
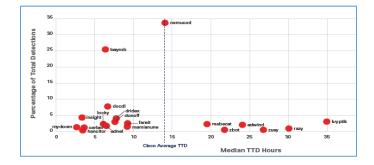

1. **Risk Analysis**
   Evaluate the clinical device data types, performance and communication over the enterprise network.
   - Safety risk
   - Privacy risk
   - Security risk
   - Operational risk

2. **Clinical Network Architecture Analysis**
   Examine how the network is architected and designed to help ensure the unique characteristics and transmissions of the clinical system remain safe, efficient and effective.

3. **Data Flow Analysis**
   Develop diagrams of clinical system data flow and discover how users utilize endpoints, types of access required and interfaces to the network.
