

### For clinicians

- See the patient status at a glance with the interactive CarePlus flowsheet
- Place orders directly from the CarePlus flowsheet for quicker actions and improved accuracy
- Display patient data clearly with the advanced and configurable graphical trends
- Improve safety and prevent errors with the associative trending
- Easily adapt the system to your needs with the advanced application configuration tool
- Save time with automated data capturing from medical devices and integration with the other hospital information systems
- Simplify the patient care process with configurable care entities and protocols
- Keep track of your workflow with a visual task list and reminders
- Benefit from reference reminders of the system in all situations

### For hospital management

- Analyze costs and care quality with advanced statistical reporting tool
- Automated scorings and coding integration (e.g. ICD-10)
- Benchmark with captured, measurable data

### For IT managers

- Based on IT industry standards for easy installation and deployment
- Sophisticated, bi-directional system integrations (ADT, LAB etc) with state-of-the-art integration engine
- Supports SSO, Active Directory and LDAP
- Quick deployment with import/export of diagnoses and procedures catalogs, pharmacy and allergy reference data
- Comprehensive range of medical devices easily integrated via RS232 or TCP/IP directly
- Dynamic hyperlinks for easy front-end integration with other hospital information systems (EMR, laboratory, PACS and many others)
- Powerful but easy to use application configuration tool
- Integrated database maintenance tools
- Supports high-availability architectures

This product complies with the provisions of the Council Directive 93/42/EEC concerning medical devices.

# Centricity™ Critical Care

## When every decision matters

In intensive care having quick access to complete patient information is fundamental. For every day's tasks or more complex activities, clinicians can rely on Centricity Critical Care to quickly obtain accurate information, when needed and where needed.

# Always with you at the point of need

## See more clearly

More and more time on modern intensive care units is spent for documentation and administrative activities. Centricity Critical Care helps you to optimize this time so that more can be dedicated to what really matters: caring for your patients.

## Know more fully

Thinking about economics is nowadays a basic requirement for every hospital. Intensive care units are requested to fit within a tight budget without giving up on quality in patient care. With Centricity Critical Care you can optimize your costs without accepting any compromises. Our local team of specialists will help you to smoothly make the change from a paper based documentation system to an electronic information management system.

Centricity Critical Care is based on IT industry standards to facilitate its installation and deployment. Its technology allows a fast implementation and an easy adjustment to your needs, from neonatal to cardiac, from intermediate to intensive care units.

## Share more widely

Enhancing care processes and quality is essential for improving the patient outcome. Centricity Critical Care is an intuitive and fully integrated application that allows you to improve quality by helping to reduce human errors. Centricity Critical Care facilitates all the necessary tasks in the patient care process.

## More information, less clicks

The interactive CarePlus flowsheet is easy and fast to use, saves time and facilitates the documentation of patient care.

## Safety first

Prescribing with advanced associative trending in Centricity helps to prevent medication errors and improves patient and user data security.

## Scoring made easy

All the major standard scoring systems are preconfigured in the system. Additional ones can be easily added, optimizing the workload and the workflow.

## Activities and costs under control

The advanced and easy to use reporting tool provides powerful statistics about quality of care, costs and performances.

## Enterprise-wide integration

Take advantage of an open system with a state-of-the-art integration engine, able to integrate seamlessly to medical devices, EMR, HIS, laboratory and all the other information systems in the hospital. The integration with standard coding and reference data systems promotes a consistent and accurate use of clinically relevant information.
