

Trends in Sepsis Management: Identify and Treat Sepsis

Based on the Surviving Sepsis Campaign, early recognition and management of sepsis can help save lives. Learn new methods of reducing variability, early sepsis recognition, and understand how “bundles”, as put forward by the Institute for Healthcare Improvement, contribute to standardized care for improved patient outcomes. [Trends in Sepsis Management: Identify and Treat Sepsis](#) helps develop the knowledge base of practicing clinicians to recognize and successfully [manage patients with sepsis.](#)

“Several Sutter Health hospitals have utilized the GE Healthcare Trends in Sepsis Management program, as part of our staff education around evidence based care of the severe sepsis patient. The severe sepsis patient population is complex and requires specific knowledge and active critical thinking skills to make safe decisions. It is very difficult to assess whether someone has grasped the critical concepts through traditional learning modules and paper post-tests. The Trends in Sepsis Management program allows our hospitals to provide the targeted information that clinical staff needs to know, and assess their competence in an interactive way that mimics the decision points they will actually be faced with. This program has definitely been a valuable tool as part of our overall effort to provide excellent evidence based care. ”
