# CardioLab<sup>®</sup> IT powered by Centricity<sup>®</sup>

## Inventory Management Module

### Overview

GE Healthcare is uniquely able to support bi-directional interfaces between clinical devices and hospital IT systems. The Centricity<sup>®</sup> Cardiology Inventory Management Module offers a time-saving inventory solution that is precise and scalable, allowing you to monitor inventory usage more accurately and capture charges more efficiently by eliminating redundant data entry. Designed to support multiple facilities and multiple labs, the Inventory Management Module can be tailored to a hospital's workflow.

### Features and Benefits

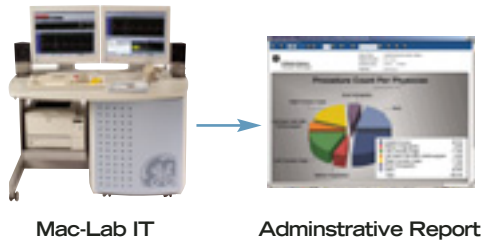

- Centralized inventory management consolidates inventory information by tracking lot numbers, on-hand levels and expiration dates, making the re-ordering process more efficient.
- Enables simultaneous tracking and documenting supplies during studies to reduce redundant data entry and increase workflow efficiency.
- When multiple physicians are involved in a case, the statistical report accurately correlates the supplies used with the correct user, eliminating mischarges and appropriately tracking resources.
- Provides stand-alone Cath lab inventory management system with the capacity to integrate with a hospital's existing inventory system, significantly reducing go-live times and improving departmental efficiency.
- Optional interface to hospital's material management system significantly reduces ongoing inventory maintenance, and ensures accurate pricing data for case cost reports and auto-decrements supply levels.
- Comprehensive inventory reports help automate key administrative responsibilities, such as tracking inventory item usage by vendor and physician, maintaining in-stock value of consignment verses non-consignment items, and providing notification of items with upcoming expirations.
