Signa 3.0T Users Share Best Practices, Clinical Techniques with Users Around the World

Launched September 2007, the GE Signa 3.0T Society on the PeerVision Online Community web site brings Signa® MR 3.0T Users together to interact and learn from one another. Through PeerVision, users can openly share ideas or opinions, forming an online community with user-generated content that shares the latest techniques in 3.0T imaging across the globe.

Within the Signa MR Imaging Community, users will find MR educational opportunities and events. The GE Signa 3.0T Society includes discussion forums, polls, a gallery for clinical case images and a library of tools and tips. Guest bloggers periodically post topics for open discussion and participants can elect to share comments on the topic or merely read along with the dialog.

PeerVision is the result of research on MR-users' information needs, incorporating customer feedback to create a "non-promotional" environment for authentic communication among

Signa MR 3.0T Users. PeerVision has several online communities for users with different interests to join and participate in any discussion, including: Advanced Visualization, Outpatient Imaging Centers and Reading Rooms.

The GE Signa 3.0T Society is open only to Signa MR 3.0T Users. The System ID, found on or near the Signa MR 3.0T System Monitor, is required for initial log in. Join the community today, www.healthcare.com/peervision. ■

With PeerVision, you can

- Join a discussion on imaging challenges or share a clinical case
- Find out what your peers think, or share your own insights

PeerVision. It's your community – GE provides the medium. You decide how it evolves.
