

PRODUCT INFORMATION BULLETIN

RE: Discontinuation of GE Marquette EforM System product line

September 27, 1999

Our records indicate that your facility has purchased an EforM cath lab physiological monitoring system, formerly known as Midas. These units were manufactured and sold by PPG Medical Systems, EforM Corporation and Marquette Medical Systems/GE Marquette Medical Systems between the years of 1990 and 1999.

Due to shortage and obsolescence of certain critical components, supplied to Marquette by other vendors, GE Marquette has decided to discontinue the manufacturing of these products. GE Marquette will continue to provide service repair on your unit(s) for 7 years; however, please be aware that many parts necessary to keep these systems operational can no longer be obtained.

We recommend that those customers with units four years or older begin planning for a suitable equipment replacement immediately by contacting your GE Marquette representative at **1-800-558-5544**.

If you have any questions regarding this notice, please contact GE Marquette Service at 1-800-558-7044.

We appreciate your understanding in this matter.

Sincerely,

Bonnie Scholten
