

GoldSeal™

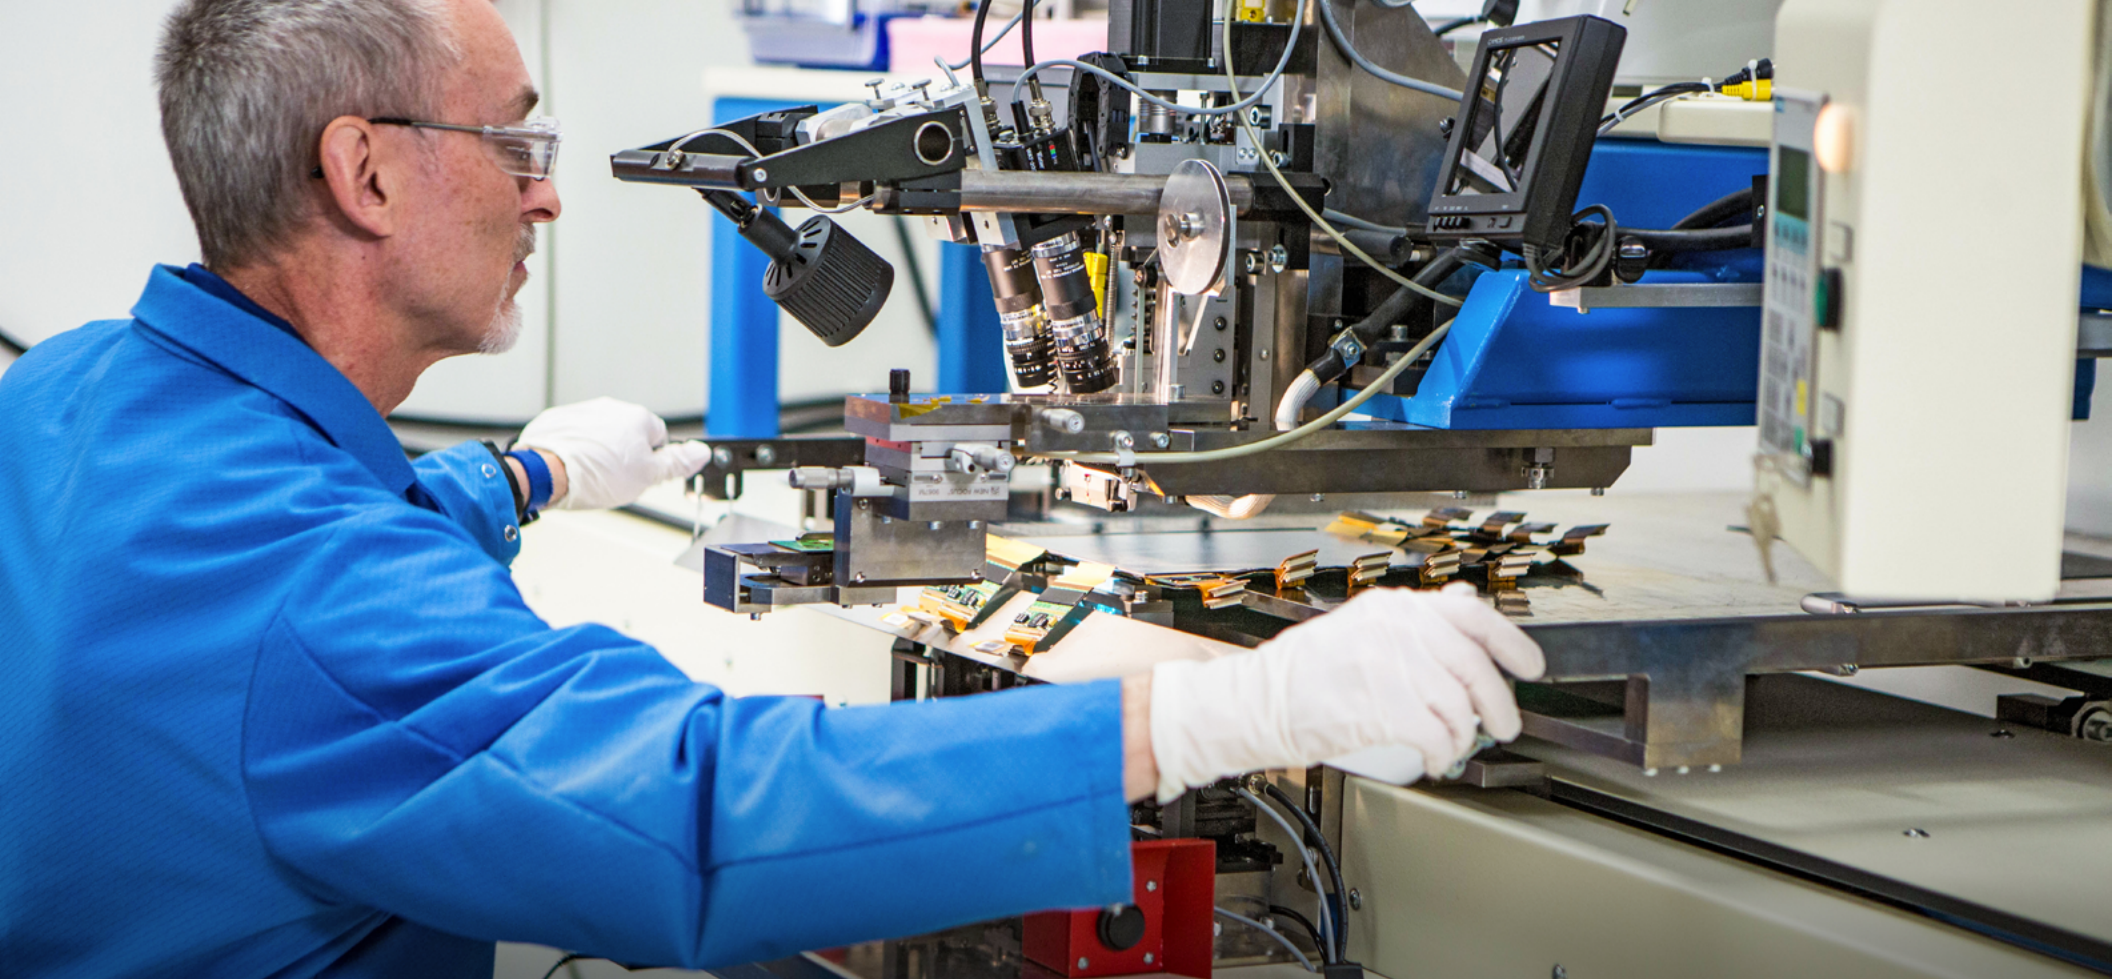

Refurbished ultrasound and imaging systems

Be there for patients no matter your budget

Your community relies on you for safe, reliable, tech-forward imaging and ultrasound services. Knowing not every facility can afford “brand new”, we have a solution that helps hospitals and imaging centers gain access to in-demand, dependable imaging equipment backed by a comprehensive warranty and a GE HealthCare field-service team you know and trust. Our solution is GoldSeal Refurbished Systems, and it’s designed to empower your organization and help you serve more patients, all while supporting your financial objectives.

Our dedication to excellence is your competitive advantage

We're known for producing exceptional technology, and that is exactly what fuels our GoldSeal program. Every device we offer is a product of GE HealthCare experience and expertise combined with a rigorous refurbishment process. Only machines that will provide the highest-quality imaging are refurbished at all. Through inspection, testing, and post-installation support, our technicians put their deep knowledge to work to meet original system specifications and performance requirements. That means GoldSeal systems meet the same quality standard as brand new. They're simply more financially accessible.

Here's to making things new again

What goes into making a GoldSeal system? When you consider that it takes more than 100 labor hours and 400 steps to refurbish and validate a CT system, you can see it's a rigorous process. Here's a look at that process and what's included in a GoldSeal purchase.

Only prime candidates picked

Our stringent selection standards ensure that only systems with well-known and acceptable service histories qualify for GoldSeal.

Includes the latest and greatest

Refurbishing includes installation of the latest possible software release and original OEM parts.

Same-as-new warranty

All GoldSeal systems include a parts and labor warranty. Typically, it's the same one-year warranty that's on new systems. Extended warranties and service contracts are also available.

OEM quality

Factory-trained technicians ensure all OEM specifications are met during the refurbishment process.

Service and support

You'll have full access to support resources, including local service and 24/7 online assistance.

Training

Operation and application training is available along with optional CE technical training where credits are earned.

Tailored to your needs

Imaging equipment is more than a purchase—it's an investment. That's why we go above and beyond to give you more than just a high-quality product. Your GoldSeal purchase also includes a comprehensive contract package which covers site planning, installation, and support documentation. Plus, you'll have some flexibility with the system. For example, you can explore configuration options, including enhanced software and special accessories for advanced clinical applications.

The next generation will thank you

One of the reasons we created GoldSeal is to promote the reuse and recycling of imaging systems, so they end up caring for patients—not in landfills. It's one way we promote a circular economy in healthcare, conserving resources and reducing our carbon footprint. When you choose a GoldSeal system, not only are you revitalizing a viable piece of medical technology and potentially extending healthcare to those who may not otherwise have access due to budget constraints, you're also helping to build a sustainable future for your employees, patients and the environment.

Choose your modality

With over 20 years in the refurbished equipment business and over 18,000+ systems sold globally; we assure you that GoldSeal is a sound choice. These systems can help you improve patient experience through excellent imaging performance while helping you maintain your organization's financial health. Our broad range of equipment includes the following modalities:

Bone Health

Computed Tomography

Interventional X-ray

Magnetic Resonance Imaging

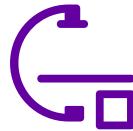

Mammography

Nuclear Medicine

OEC C-arms

PET/CT

Radiography & Fluoroscopy

Ultrasound
