# DISCOVERY CT590/RT - OPTIMA CT580 RT/W FINAL STUDY

	Drawn by		Drawn by		n by Verified by Concession GON/Quote		PIM Manual	Rev
	R	RET	AAP	-		5366636-1EN	23	
ie	Format	Scale		File Name			Sheet	
10	A3	1/4"=1'-0 <b>E</b>	N-CT-TYP-DISCOV	/ERYRT_OPTIMA5	G 19/Dec/2024	01/16		

A mandatory component of this drawing set is the GE HealthCare Pre Installation manual. Failure to reference the Pre Installation manual will result in incomplete documentation required for site design and preparation.

Pre Installation documents for GE HealthCare products can be accessed on the web at: https://www.gehealthcare.com/support/manuals

GE HealthCare does not take responsibility for any damages resulting from changes on drawings made by others. Errors may occur by not referring to the complete set of final issue drawings. GE HealthCare cannot accept responsibility for any damage due to the partial use of GE HealthCare final issue drawings, however caused. All dimensions are in millimeters unless otherwise specified. Do not scale from printed pdf files. GE HealthCare accepts no responsibility or liability for defective work due to scaling from these drawings.

#### **DISCLAIMER**

#### **GENERAL SPECIFICATIONS**

- GE is not responsible for the installation of developers and associated equipment, lighting, cassette trays and protective screens or derivatives not mentioned in the order.
- The final study contains recommendations for the location of GE equipment and associated devices, electrical wiring and room arrangements. When preparing the study, every effort has been made to consider every aspect of the actual equipment expected to be installed.
- The layout of the equipment offered by GE, the dimensions given for the premises, the details provided for the pre-installation work and electrical power supply are given according to the information noted during on-site study and the wishes expressed by the customer.
- The room dimensions used to create the equipment layout may originate from a previous layout and may not be accurate as they may not have been verified on site. GE cannot take any responsibility for errors due to lack of information.
- Dimensions apply to finished surfaces of the room.
- Actual configuration may differ from options presented in some typical views or tables.
- If this set of final drawings has been approved by the customer, any subsequent modification of the site must be subject to further investigation by GE about the feasibility of installing the equipment. Any reservations must be noted.
- The equipment layout indicates the placement and interconnection of the indicated equipment components. There may be local requirements that could impact the placement of these components. It remains the customer's responsibility to ensure that the site and final equipment placement complies with all applicable local requirements.
- All work required to install GE equipment must be carried out in compliance with the building regulations and the safety standards of legal force in the country concerned.
- These drawings are not to be used for actual construction purposes. The company cannot take responsibility for any damage resulting therefrom.

#### **CUSTOMER RESPONSIBILITIES**

- It is the responsibility of the customer to prepare the site in accordance with the specifications stated in the final study. A detailed site readiness checklist is provided by GE. It is the responsibility of the customer to ensure all requirements are fulfilled and that the site conforms to all specifications defined in the checklist and final study. The GE Project Manager of Installation (PMI) will work in cooperation with the customer to follow up and ensure that actions in the checklist are complete, and if necessary, will aid in the rescheduling of the delivery and installation date.
- Prior to installation, a structural engineer of record must ensure that the floor and ceiling is designed in such a
  way that the loads of the installed system can be securely borne and transferred. The layout of additional
  structural elements, dimensioning and the selection of appropriate installation methods are the sole
  responsibility of the structural engineer. Execution of load bearing structures supporting equipment on the
  ceiling, floor or walls are the customer's responsibility.

#### **RADIO-PROTECTION**

• Suitable radiological protection must be determined by a qualified radiological physicist in conformation with local regulations. GE does not take responsibility for the specification or provision of radio-protection.

THE UNDERSIGNED, HEREBY CERTIFIES THAT I HAVE READ AND APPROVED THE PLANS IN THIS DOCUMENT.			
DATE	NAME	SIGNATURE	

## **CUSTOMER SITE READINESS REQUIREMENTS**

REQUIRED MANUALS FOR SYSTEM PRE-INSTALLATION			
Description	Document Number*		
Product specific Pre-installation Manual Refer to cover page			
*documents can be accessed in multiple languages at https://www.gehealthcare.com/support/manuals			

- A mandatory component of this drawing set is the GE HealthCare Pre-installation manual. Failure to reference the Pre-installation manual will result in incomplete documentation required for site design and preparation.
- The items on the GE HealthCare Site Readiness Checklists listed below are REQUIRED to facilitate equipment delivery to the site. Equipment will not be delivered if these requirements are not satisfied.

REQUIRED SITE-READINESS CHECKLISTS FOR SYSTEM PRE-INSTALLATION				
Modality	Document Number*			
Computerized Tomography	DOC2949059			
Radiology, Radiology and Fluouroscopy, Mammography, Bone Mass Densitometry	DOC2949063			
All modality Customer/Contractor Worksheet DOC2949068				
*documents can be accessed in multiple languages at https://www.gehealthcare.com/support/manuals				

- Any deviation from these drawings must be communicated in writing to and reviewed by your local GE HealthCare installation project manager prior to making changes.
- Make arrangements for any rigging, special handling, or facility modifications that must be made to
  deliver the equipment to the installation site. If desired, your local GE HealthCare installation project
  manager can supply a reference list of rigging contractors.
- New construction requires the following;
  - 1. Secure area for equipment,
  - 2. Power for drills and other test equipment,
  - 3. Restrooms.
- Provide for refuse removal and disposal (e.g. crates, cartons, packing)
- For CT systems it is required to minimize vibrations within the scan room. It is the customer's responsibility to contract a vibration consultant/engineer to implement site design modifications to meet the GE vibration specification. Refer to the system Pre-installation manual for vibration specifications.

## **ENVIRONMENT**

#### **ALTITUDE**

• The system shall meet all functional and performance specifications when placed in a room that is at an elevation of -150 m to 2,400 m [-492 ft to 7,875 ft] above sea level. For different altitudes refer to the PIM.

#### **MAGNETIC FIELD SPECIFICATIONS**

• Limit the magnetic interference to guarantee specified imaging performance.

#### **GANTRY:**

- Ambient static magnetic fields less than 1 Gauss.
- Ambient AC magnetic fields less than 0.01 Gauss peak.

#### **OPERATOR CONSOLE:**

• Ambient static magnetic fields less than 10 Gauss.

#### SYSTEM COMPONENT NOISE LEVEL

- Maximum Gantry Audible Noise Level: The maximum ambient noise level is produced by the gantry during a CT scan acquisition. It is less than 75 dBA when measured at a distance of 1 m [3.3 ft] from the nearest gantry surface, in any direction.
- Maximum Console Audible Noise Level: The maximum ambient noise levels is less than or equal to 56 dBA when measured 1 m [3.3 ft] up and 1 m [3.3 ft] away from the console at an ambient temperature of 26°C [79°F].

## **RADIATION PROTECTION LAYOUT**

SHIELDING REQUIREMENTS SCALING				
CHANGED PARAMETER (mAs)	MULTIPLICATION FACTOR (new mAs/100)			
80 kV	0.21			
120 kV	0.71			
140 kV	1.00			
4x3.75 mm images	0.82			
16x0.625 LD 8x1.25 LD Fluro 5 mm	0.59			
4x1.25 LD 5 mm (1i) Fluro 2.5 mm	0.40			
1x1.25 mm images	0.20			
4x0.625 LD 1x1.25	0.10			

#### **SHIELDING REQUIREMENTS:**

Engage a qualified radiological health physicist to review your scan room shielding requirements, taking into consideration:

Scatter radiation levels within the scanning room

- Equipment placement
- Weekly projected work-loads (number of patients/day technique (kvp\*ma))
- Materials used for construction of walls, floors, ceiling, doors, and windows
- Access to surrounding scan room areas
- Equipment in surrounding scan room areas (e.g., film developer, film storage)

The illustration on this page depicts measurable radiation levels within the scanning room while scanning a 32 cm CTDI phantom (body) with the technique shown:

- 140 kVA
- 100 mA
- 1 sec
- 4x5.00 mm

**NOTE:** All measurements have an accuracy of ± 20% because of measurement equipment, technique, and system-to-system variation. Use the correction factors shown in the table above to adjust exposure levels to the usual scan technique at your site.

## **DELIVERY**

## THE CUSTOMER/CONTRACTOR SHOULD:

- Provide an area adjacent to the installation site for delivery and unloading of the GE equipment.
- Ensure that the dimensions of all doors, corridors, ceiling heights are sufficient to accommodate the movement of GE equipment from the delivery area into the definitive installation room.
- Ensure that access routes for equipment will accommodate the weights of the equipment and any transportation, lifting and rigging equipment.
- Ensure that all necessary arrangements for stopping and unloading on public or private property not belonging to the customer have been made.

DIMENSIONS OF DELIVERY WITH DOLLY TRANSPORT EQUIPMENT					
EQUIPMENT		DIMENSIONS			WEIGHT
	LENGTH	3100 mm	122 in		
GANTRY	WIDTH	1290 mm	51 in	2016 kg	4445 lbs
	HEIGHT	2030 mm	80 in		
	LENGTH	2489 mm	98 in		
GT1700 TABLE	WIDTH	762 mm	30 in	607 kg	1337 lbs
	HEIGHT	1143 mm	45 in		

## **GANTRY DELIVERY**

• The gantry is shipped on a dolly equipped with elevating casters (normal shipping configuration). NOT TO SCALE

#### **STRUCTURAL NOTES**

- all steel work and parts necessary to support ceiling mounted equipment is to be supplied by the customer or his contractors.
- methods of support for the steelwork that will permit attachment to structural steel or through bolts in concrete construction should be favored. Do not use concrete or masonry anchors in direct tension.
- all units that are wall mounted or wall supported are to be provided with supports where necessary. Wall supports are to be supplied and installed by the customer or his contractors. See plan and detail sheets for suggested locations and mounting hole locations.
- all ceiling mounted fixtures, air vents, sprinklers, etc. To be flush mounted, or shall not extend more than 1/4" below the finished ceiling.
- floor slabs on which equipment is to be installed must be level to 1/4" in 10'-0"
- dimensions are to finished surfaces of room.
- customers contractor must provide all penetrations in post tension floors.
- customers contractor must provide and install any non-standard anchoring. Documents for standard anchoring methods are included with GE equipment drawings for geographic areas that require such documentation.
- customers contractor must provide and install hardware for "through the floor" anchoring and/or any bracing under access floors. This contractor must also provide floor drilling that cannot be completed because of an obstruction encountered while drilling by the GE installer such as rebar etc.
- it is the customer's responsibility to perform any floor or wall penetrations that may be required. The customer is also responsible for ensuring that no subsurface utilities (e.g., electrical or any other form of wiring, conduits, piping, duct work or structural supports (i.e. post tension cables or rebar)) will interfere or come in contact with subsurface penetration operations (e.g. drilling and installation of anchors/screws) performed during the installation process. To ensure worker safety, GE installers will perform surface penetration operations only after the customer's validation and completion of the "GE surface penetration permit"

ITEM	DESCRIPTION			
1	Gantry leveling pads. See Structural Detail			
2	Table leveling pads. See Structural Detail			
(CONTRACTOR SUPPLIED & INSTALLED)				
3	Support Backing, locate as shown			

## ANCHORING/LOADING DISTRIBUTION TO THE FLOOR

**FLOOR REQUIREMENTS** 

#### **GE SUPPLIED TABLE/GANTRY ANCHORS**

#### NOTES:

- The distance from central line of anchor to the edge of concrete basement of Gantry/Table should not be less than 178 mm [7 in].
- Torque anchor to 54 Nm [40 ft-lb]

#### **FINISHED FLOOR REQUIREMENTS**

- Installation requires a finish floor in the scan and control rooms
- The floor surface in the scan room directly under the gantry and table must be level.
- The floor levelness tolerance of the floor surface that the gantry and table will rest on is 6 mm [1/4 in] over a 3048 mm [10 ft] distance.
- Shims should not be used to compensate for a floor that does not meet this requirement.
- Eight or more floor covering openings that are 102 mm [4 in] in diameter are made to ensure the table and gantry rest on a solid surface. These floor penetrations can be sealed if required.
- Concrete floors must have a minimum strength of f'c = 1.4 X10<sup>7</sup> Pa [2000 PSI] at 28 days for (curing time) mounting floor anchors. It is the responsibility of each customer to have appropriate tests performed to determine and measure concrete strength.
- These requirements apply to all installation types.

#### NOT TO SCALE

## **TEMPERATURE AND HUMIDITY SPECIFICATIONS**

## **IN-USE CONDITIONS**

	EXAM ROOM			(	CONTROL ROOM	1
	Min	Recommended	Max	Min	Recommended	Max
Temperature	18°C	22°C	26°C	18°C	22°C	26°C
	64°F	72°F	79°F	64°F	72°F	79°F
Relative humidity (1)		30% to 60%			30% to 60%	

#### **STORAGE CONDITIONS**

Temperature	0°C to 30°C
remperature	32°F to 86°F
Relative humidity (1)	up to 70%
Temperature gradient	≤ 3C/h
remperature gradient	5°F/h
Humidity gradient	≤ 5%/h

Material should not be stored for more than 6 months.

(1) non-condensing

#### **AIR RENEWAL**

According to local standards.

#### NOTE

In case of using air conditioning systems that have a risk of water leakage it is recommended not to install it above electric equipment or to take measures to protect the equipment from dropping water.

## **HEAT DISSIPATION DETAILS**

ROOM	DESCRIPTION	Max kW	Max BTU		
	Gantry	8.96	30570		
Exam Room	Patient Table	0.3	1030		
	TOTAL	9	31600		
	Power Distribution Unit	1.0	3400		
Exam Room or Technical Room*	Partial UPS	0.83	2828		
	TOTAL	2	6228		
	Operator Console with 2 LCD monitors	2.4	8189		
Control Room	Smart Subscription Server ML350G10	1.8	6134		
	TOTAL	4	14323		
*Technical Room is not mandatory, the placements of these elements are recommended in the Exam Room.					

### **ELECTRICAL NOTES**

- 1. Aluminum or solid wires are not allowed.
- 2. Wire sizes given are for use of equipment. Larger sizes may be required by local codes.
- 3. It is recommended that all wires be color coded, as required in accordance with national and local electrical codes.
- 4. Conduit sizes shall be verified by the architect, electrical engineer or contractor, in accordance with local or national codes
- 5. Convenience outlets are not illustrated. Their number and location are to be specified by others. Locate at least one convenience outlet close to the system control, the power distribution unit and one on each wall of the procedure room. Use hospital approved outlet or equivalent.
- 6. General room illumination is not illustrated. Caution should be taken to avoid excessive heat from overhead spotlights. Damage can occur to ceiling mounting components and wiring if high wattage bulbs are used. Recommend low wattage bulbs no higher than 75 watts and use dimmer controls (except MR). Do not mount lights directly above areas where ceiling mounted accessories will be parked.
- 7. Routing of cable ductwork, conduits, etc., must run direct as possible otherwise may result in the need for greater than standard cable lengths (refer to the interconnection diagram for maximum usable lengths point to point).
- 8. Conduit turns to have large, sweeping bends with minimum radius in accordance with national and local electrical codes.
- 9. In some cases GEHC will specify ground wires to be sized larger than code. In these situations, the GEHC specification must be followed.
- 10. A special grounding system is required in all procedure rooms by some national and local codes. It is recommended in areas where patients might be examined or treated under present, future, or emergency conditions. Consult the governing electrical code and confer with appropriate customer administrative personnel to determine the areas requiring this type of grounding system.
- 11. The maximum point to point distances illustrated on this drawing must not be exceeded.
- 12. Physical connection of primary power to GEHC equipment is to be made by customers electrical contractor with the supervision of a GEHC representative. The GEHC representative would be required to identify the physical connection location, and insure proper handling of GEHC equipment.
- 13. GEHC conducts power audits to verify quality of power being delivered to the system. The customer's electrical contractor is required to be available to support this activity.
- 14. Every installation is unique. The electrical contractor will be required to support the installation of the GEHC equipment by providing knockouts, grommeted openings, bushings, etc. as required. All power connections to be performed by the electrician.

- All junction boxes, conduit, duct, duct dividers, switches, circuit breakers, cable tray, etc., are to be supplied and installed by customers electrical contractor. All junction boxes shall be provided with covers.
- Conduit and duct runs shall have gradual sweep radius bends.
- Conduits and duct above ceiling or below finished floor must be installed as near to ceiling or floor as possible to reduce run length.
- Ceiling mounted junction boxes illustrated on this plan must be installed flush with finished ceiling.
- All ductwork must meet the following requirements:
  - 1.Ductwork shall be metal with dividers and have removable, accessible covers.
  - 2. Ductwork shall be certified/rated for electrical power purposes.
  - 3. Ductwork shall be electrically and mechanically bonded together in an approved manner.
  - 4. PVC as a substitute must be used in accordance with all local and national codes.
- All openings in raceway and access flooring are to be cut out and finished off with grommet material by the customers contractor.
- Electrical contractor to provide measured pull strings in all conduit and raceway runs.
- Provide 10 foot pigtails at all junction points.
- Grounding is critical to equipment function and patient safety. Site must conform to wiring specifications shown on this
  plan.

## **CONNECTIVITY REQUIREMENTS**

Your new GE Healthcare imaging modality will require local and remote connectivity to enable our full range of digital support:

- Local connectivity This allows your system to connect to local devices such as PACS and modality worklist. We will require network information to configure the system(s), and a live ethernet port(s) prior to the delivery of the system(s).
- Remote connectivity Your GE Healthcare service warranty includes InSite™ (applicable to InSite capable products), a powerful broadband-based service which enables digital tools that can help guard your hospital against equipment downtime and revenue loss by quickly connecting you to a GE Healthcare expert.

Depending on product family and software version, imaging systems can be connected in one of the following methods:

- 1. TLS over TCP Port 443 (Preferred method for new products) via:
  - a. DNS resolution
  - b. Customer-provided Proxy or
  - c. GE Proxy (Available in some regions)
  - 2. Site-to-Site IPsec VPN tunnel

Please provide the GE project manager with the contact information for the resource that can provide information required to set up these connections. GEHC will send out communication to these contacts, which will include the project's Connectivity requirements, and a Connectivity form. This form will need to be completed and returned to GEHC prior to delivery of the system to ensure the system is tested and connectivity is enabled prior to the completion of the installation.

Item	Electrical Layout Item List
1	Main disconnect panel (MDP)

6	Power Distribution Unit	5		1	2	50
Rev DIDate 19/Dec/2024			F2 - Flectrical Layout			15/16

## **POWER REQUIREMENTS**

POWER SUPPLY	3 PHASES+G 380/400/420/440/460/480 V ± 10%
FREQUENCIES	50/60 Hz ± 3 Hz
MAXIMUM POWER DEMAND	150 kVA
AVERAGE (CONTINUOUS) POWER DEMAND	30 kVA
POWER FACTOR	0.85

- Power supply should come into a Main Disconnect Panel (MDP) containing the protective units and controls.
- The section of the supply cable should be calculated in accordance with its length and the maximum permissible voltage drops.
- There must be discrimination between supply cable protective device at the beginning of the installation (main low-voltage transformer side) and the protective devices in the MDP.

#### **SUPPLY CHARACTERISTICS**

- Power input must be separate from any others which may generate transients (elevators, air conditioning, radiology rooms equipped with high speed film changers...).
- All equipment (lighting, power outlets, etc...) installed with GE system components must be powered separately.
- The minimum recommended transformer size for a dedicated distribution transformer provided for the system is 225kVA, rated 2.4% regulation at unity power factor.
- Phase imbalance 2% maximum.
- Maximum voltage variation at 150kVA = 5% (Including line impedance.)
- Transients must be less than 1500V peak. (on a 400V line)

#### **GROUND SYSTEM**

- System of equipotential grounding.
- Equipotential: The equipotential link will be by means of an equipotential bar. This equipotential bar should be connected to the protective earth conductors in the ducts of the non GE cableways and to additional equipotential connections linking up all the conducting units in the rooms where GE system units are located.

#### **CABLES**

- Power and cable installation must comply with the distribution diagram.
- All cables must be isolated and flexible, cable color codes must comply with standards for electrical installation.
- The cables from signaling and remote control (Y, SEO, L...) will go to MDP with a pigtail length of 1.5m [4.9'], and will be connected during installation. Each conductor will be identified and isolated (screw connector).

#### **CABLEWAYS**

The general rules for laying cableways should meet the conditions laid down in current standards and regulations, with regard to:

- Protecting cables against water (cableways should be waterproof).
- Protecting cables against abnormal temperatures (proximity to heating pipes or ducts).
- Protecting cables against temperature shocks.
- Replacing cables (cableways should be large enough for cables to be replaced).
- Metal cableways should be grounded.

#### **POWER DISTRIBUTION**

For Main Supply (3 phases) Feeder and Ground wire size Refer to Table2

For Sub-Feeder and Ground

wire size refer to Table2 (3)

#### **Feeder Table**

Partial UPS

(option)

The information below assumes the use of copper wire, rated 75 C and run in steel conduit. All ampacity is determined in accordance with the National Electrical Code (NFPA 70), Table 310-16 (2002). The ampacity of the circuit protection device listed above determines the minimum feeder size, except where total source regulation limits require a larger size. If the wire size does not match the lists below, please select the nearest wire size as per to local standards.

Feeder length from Power	Minimum Wire Size, AWG or MCM (mm²)/VAC						
Substation to MDP - ft (m)	380 VAC	400 VAC	420 VAC	440 VAC	460 VAC	480 VAC	
50 (15)	1/0 (50)	1/0 (50)	1/0 (50)	1 (45)	1 (45)	1 (45)	
100 (30)	1/0 (50)	1/0 (50)	1/0 (50)	1 (45)	1 (45)	1 (45)	
150 (46)	1/0 (50)	1/0 (50)	1/0 (50)	1 (45)	1 (45)	1 (45)	
200 (61)	1/0 (50)	1/0 (50)	1/0 (50)	1 (45)	1 (45)	1 (45)	
250 (76)	2/0 (70)	2/0 (70)	1/0 (50)	1/0 (50)	1 (45)	1 (45)

Sub-Feeder length from MDP to PDU - ft (m)							
32 (9.7536)	1/0 (50)	1/0 (50)	1/0 (50)	1 (45)	1 (45)	1 (45)	
Grounding							

Run a dedicated 1/0 [50 mm²] or larger insulated copper ground wire from the power source to the MDP and from MDP to the PDU. Run the ground wire in the same raceway with the three-phase wires.

#### Notes:

- (1) Wire size: 4x2mm<sup>2</sup> [14AWG] and 1x2mm<sup>2</sup> [14AWG] GND
- (2) Power control cable: 3 Meter [10 ft], multi-conductor, 24V DC
- GE supplied MDP option E45021BC includes a 10 meter long power cable (H07RN-F) with wire size 4x50mm<sup>2</sup> and a 50 meter long control cable with wire size 2x1.5mm<sup>2</sup>

## **TYPICAL CABLE MANAGEMENT**

#### CONDUIT IN THE FLOOR

NOT TO SCALE

## SCAN ROOM WARNING LIGHT AND DOOR INTERLOCK

(1) Wire size: 2mm<sup>2</sup> [14 AWG] at 24V

Door Interlock circuit is jumpered out if a door switch is not provided.

(3) Grounding not shown on the detail, but must comply with local codes.
