

Single patient use flow sensor technology from GE Healthcare

The flow sensor is one of the most important components of your critical care ventilator. It automatically checks patient airway flow and pressure 250 times per second, making it the “eye” of your ventilator. The CARESCAPE™ R860 flow sensor and exhalation valve assembly (EVA) are now available for **single patient use** in addition to the reusable option.

Why switch to single patient use?

The GE Healthcare precision flow sensor for single patient use delivers the same speed and control you’re used to with the reusable flow sensor.

Infection control – single patient use accessories reduce the risk of cross-contamination and help lower the risk of costly ventilator associated infections

Precise – state of the art digital communication, sensing tidal volume from pediatrics to large adults

Workflow efficiency - no sterilization or assembly required, which could lead to time and cost savings

Clean. Consistent. Controlled.

Reduce the risk of infection and deliver precise flow for every patient.

To determine which solution is best for you, contact your GE Healthcare representative.

gehealthcare.com

Our equipment. Our accessories. Simply compatible.

You can trust GE Healthcare accessories and consumables to keep your clinical devices working efficiently.

- One contact point for expert advice
- Simplified ordering process
- Fast delivery
- Quality support at every step

ORDERING OPTIONS

	Part Number	Flow Sensor Included	Exhalation Valve Assembly Included	Pieces/pkg
Flow Sensor & EVA Kit 	1505-3848-001	Y	Y	1
EVA Only 	1505-8568-001	N	Y	1
Flow Sensor Only 	1505-3231-001	Y	N	1

PRODUCT SPECIFICATIONS

Compatibility

CARESCAPE R860 Ventilator
Engström Ventilators

Patient Use

Suitable for the full duration of a patient's time on ventilator and all patient groups

Minute volume 0 to 99.9 L/min
Patient flow 1 to 200 L/min
Airway pressure -20 to +120 cm H₂O

Operating conditions

10° to 40°C, 15 to 95% relative humidity non-condensing

Storage conditions

15% to 95% relative humidity (50°C)
15% to 75% relative humidity (60°C) non-condensing

Cleaning

Products are single use and are not meant to be cleaned, disinfected or sterilized. Reuse of single use accessories may cause inaccurate monitoring, alarms and infection risk to the patient.
