

Radiation Protection

GE HealthCare Life Saving Principles

Control exposure to ionizing radiation

Always

- 1 Follow local rules and procedures
- 2 Verify only authorized persons gain access to radiation-controlled areas or radiation generating equipment
- 3 Know emergency procedures and report incidents to the Radiation Protection Officer
- 4 Use concepts of ALARA (as low as reasonably achievable) reducing exposure time, increasing distance and using shielding

Never

- 1 Perform any activities if safety devices, radiation detection instruments, or source handling tools are impaired
- 2 Place your body or allow another person to be in the path of the primary x-ray beam
