

## Look closer to discover a comprehensive, secure, one-step ultrasound process

A streamlined solution brought to you by **Barcode Scanner**, a feature of the **Ready, Scan, Go** workflow from the **GE HealthCare Venue Family**

## It's all in the wrist

The GE HealthCare Venue™ Family with Ready, Scan, Go™ makes importing patient information intuitive, easy, and secure with wristband barcode scanning. This efficient one-step process is critical for POCUS and another important time-saver.

By implementing a total encounter-based workflow solution, including RFID badge scanning for clinicians, barcode scanning of patient bracelet information and reporting, clinicians can save up to 79% of time vs. manual traditional processes.\*

### Just scan and load

Manually typing in patient data is time consuming and leaves plenty of room for error. With the Venue Family, clinicians can simply scan the patient's wristband and all of their information populates into the device automatically—and most importantly, accurately.

## A faster, more secure, and more accurate ultrasound experience

**Increase workflow efficiency**—Reduces friction and expedites the onboarding process of inputting patient information.

**Capture patient information**—Meet compliance requirements by improving visibility into all user interactions with patient records on medical devices.

**Eliminates user error**—No more manual typing of patients' names or numbers.

**EMR functionality**—Clinicians are able to populate patient information from the EMR onto the machine itself, allowing them to scan without having to create a separate order.

### The Venue Family

Venue

Venue Go™

Venue Fit™

The Venue Family with Ready, Scan, Go takes the hassle out of inputting patient data to streamline authentication workflows and makes secure authentication practical and routine. One-step patient barcode scanning empowers clinicians to import and receive patient information exactly when and where they need it most, saving time and increasing accuracy.

**37%** time-savings by implementing barcode scanning of patient bracelet information vs. manual entry\*
