# Look closer and discover the benefits of lightning fast, more secure logins

Instant and secure access with **Imprivata**, a feature of the **Ready, Scan, Go** **workflow from the GE HealthCare Venue Family**

Focus on patients not process

Doctors and clinicians using point-of-care ultrasound often don't have a moment to spare. **The GE HealthCare Venue™ Family with Ready, Scan, Go™** is the only POCUS platform enabled with Imprivata® to support a fast and intuitive "badging in and out" process that most clinicians and doctors are already accustomed to.

Imprivata allows clinicians to sign in with an RFID badge reader, making their logins simple, fast, and secure. The process is done by one-tap operation. Hospitals or administrators can set security levels based on users' needs and enable additional security measures like two-factor authentication, keeping patient data secure and providing access to only authorized users.

Experience a more secure, streamlined workflow with world-class ultrasound. **No limitations.**

25% time-savings by implementing RFID badge scanning vs. manual entry*

GE HealthCare   imprivata®

Check all the boxes with one tap

Improve security
Enables authentication to access medical devices and transact with patient information.

Safeguard patient health information
Maintain compliance by improving visibility into user interactions with patient data on mobile devices. Exams are easily documented using your name.

Increase workflow efficiency
Replace usernames and passwords with fast, authentication through the tap of a badge.

Increase productivity
A smarter, more efficient process relieves clinicians of manual data entry, saving precious time and effort to care for patients.

Imprivata enables tighter security protocols by making device access simple and seamless for clinicians. Organizations can lock down network-connected devices and enforce stronger regulation for password complexity, session time-outs, auto-lock functionality, and more without impeding on clinician productivity.

Imprivata also offers detailed reporting capabilities to establish a secure, auditable chain of trust for device access. This gives your organization better visibility into how, when, and where clinicians access and interact with patient health information.

Most importantly, Imprivata streamlines authentication workflows and makes secure authentication practical by empowering clinicians to lock and unlock access to Venue Family devices with a simple badge tap or scan. By implementing RFID badge scanning, clinicians can save up to 25% of time vs. manually entering login credentials into the Venue system.* This takes the burden off clinicians and administrators with frictionless workflows and a more enjoyable overall process.
