

Focusing on sustainability in surgical imaging solutions

OEC 3D

Premium mobile CBCT C-arm

GE HealthCare

Creating a more sustainable future requires us to care for the planet and its inhabitants

It is essential that we continue to drive progress toward early, precise, and accessible diagnosis and treatment of more patients. For the planet, it is critical that we do so with a reduced impact on precious and rare resources that are imperative to life. We believe that the advancement of precision medicine, greater digitization of healthcare, and increased access to quality care are fundamental to accomplishing this goal.

We support carbon policies that reduce greenhouse gas emissions and promote sustainable development. GE HealthCare has a goal to achieve net zero by 2050. An interim goal is to reduce our operational emissions (Scope 1 and 2) by 42%* and our Scope 3 emissions from purchased goods and services, upstream transportation and distribution, business travel, and use of sold products by 25%** by 2030 compared to a 2022 baseline. In 2024, we received validation on our updated goals from the Science Based Targets initiative (SBTi), a group of visionary corporate leaders taking ambitious climate action. As a result of these efforts, we want to enable a more sustainable health system by addressing not only the environmental impacts of our products but also the challenges healthcare professionals and their patients face with resilient, digital solutions.

We have a goal to achieve net zero emissions by 2050.

We've set interim goals to reduce Scope 1 and 2 emissions by 42% and Scope 3 emissions by 25%* by 2030.**

* from a 2022 baseline year.

** includes purchased goods and services, upstream transportation and distribution, business travel, and use of sold products from a 2022 baseline year.

Leading a new era in sustainability for a more resilient tomorrow

We're creating a world where healthcare has no limits, helping to improve access to care and enable better patient outcomes.

Environmental

Using fewer resources for a healthier planet.

Digital

Transforming healthcare through innovation.

Resilience

Building flexibility and dependability across healthcare systems.

Helping to create a more sustainable tomorrow

Our OEC 3D C-arm and its services help ensure clinicians and the patients they serve have the technology necessary to create a more sustainable and resilient tomorrow.

Reducing environmental impact

- Up to 95% of the C-arm materials are recyclable.¹
- OEC 3D conforms to international standards for environmental design, hazardous substance reduction, and electronic waste management.

Improving care

- Energy utilization operates on single-phase, cord-connected, standard wall power.
- Utilizes internal batteries and a battery charger buffer to manage X-ray generator energy demand.
- Enhances cardiovascular imaging with eNR for equivalent image appearance of 30 kW power.²
- Less radiation and power is needed with Live Zoom, which enables up to 4X zoom during fluoro or cine with no change in dose.

² Based on GE HealthCare study of OEC 3D imaging results with application of enhanced noise reduction algorithm

Contributing to a healthier planet

More than half of the healthcare sector's climate footprint, approximately 53%, is attributable to energy use.³ As a result, we have strengthened our commitment to environmentally conscious design and we are implementing more sustainable practices across our product manufacturing, sourcing, distribution, installation, and service operations. This includes improving energy efficiency, optimizing the use of limited or rare materials, providing digitally enabled service throughout the product lifespan, and offering refurbishment and recycling options at the end of product life.

We're committed to environmental product design

The OEC 3D conforms to the international standard for environmental design, IEC60601-1-9:2007.

³ Health care climate footprint report | Health Care Without Harm (noharm-uscanada.org), based on 2019 report

Materials

GE HealthCare reviews the environmental aspects of the material supply used within our products to increase recyclability and decrease the use of hazardous substances, when possible.

Recyclability

We're committed to high recyclability of our products and reuse when possible.

Up to 95% of the system materials in the OEC 3D is recyclable.⁴

Reduce the use of hazardous substances

EU RoHS directive 2011/65/EU

REACH (EC) 1907–2006

Manufacturing

Through our environmental reviews, we also focus on implementing more renewable energy and reducing waste, when possible.

Renewable energy

Our Salt Lake City manufacturing site electrical service provider continues to expand its renewable energy resources and envisions a 74% reduction of greenhouse gas emissions from 2005 levels by 2030.⁵

Reducing electricity

Continuous improvement goals in manufacturing process efficiency result in lower energy demand per unit produced.

⁴ Data on file.

Packaging and distribution

GE HealthCare imaging equipment has a robust and multi-sourced supply chain for systems and spare parts across our product portfolios.

Product packaging

Packaging is designed to optimize product transportation protection, safety, and material reuse.

Up to 86% of transport packaging is made of recyclable and reusable wood and cardboard.

Product transportation⁶

+/-80% International: Air transport

+/-10% International: Ocean transport

+/-10% International, 100% USA: Truck transport

⁶ The values provided are based on product transportation and distribution during 2021.

Product utilization

Our imaging products are designed to help enable energy efficiency through dedicated features and advanced applications to reduce the environmental impact. Ergonomic design can help to enhance health and potentially reduce environmental impacts, such as reducing waste and saving energy.

Ergonomically designed

Patient setup and positioning

OEC 3D C-arm is designed to minimize interference with patient table or the need to adjust patient table height with low lateral height and sleek X-ray tube housing design that aids detector placement.

Integrated depth perception camera, Live View, enables real-time view to position detector on patient anatomy, minimizing the need for scout images and radiation exposure while positioning the C-arm.

Integrated laser aimers are also provided to align the detector with patient anatomy prior to taking an X-ray, minimizing unnecessary radiation exposure.

Reduce staff burden

For the clinical team in the operating room, physical strain and effort is minimized with a lightweight C-arm and workstation design, weighing less than other mobile 3D C-arms.

The OEC 3D is also efficient to set up with a quick boot-up time of less than a minute and Smart Connect, which enables patient data to be entered into the workstation while the C-arm is being positioned around the patient table and not yet connected.

Surgical team can see large, clear images with a 32" 4K UHD display that easily positions for line of sight and has the ability to increase viewing perspective up to 60% with 27 inches of forward display travel.

Product utilization

Guidance for product utilization

Instructions are provided for use of the equipment to minimize the environmental impact during installation, use, and operation.

Reduce energy consumption during use

Internal batteries and battery charger buffer the X-ray generator energy demand during fluoroscopy and allow the OEC 3D C-arm system to operate on single-phase, cord-connected wall power.

Power consumption

Off mode: 0.32 kW·h
Power low: 0.55 kW·h
Scan mode: 0.58 kW·h

24 hour energy consumption⁷

Off mode: 7.6 kW·h
Power low: 13.2 kW·h
Scan mode: 14 kW·h

⁷ As measured according to COCIR X-ray Equipment Measurement of Energy Consumption, March 2014.

End of product life

We are increasingly putting our retired products' materials back into the supply chain to maximize efficient use and minimize unnecessary waste. This circularity model enables our imaging products to extend their clinical impact through longer lifespans while reducing the environmental footprint. Additionally, we offer our customers support for upgrades and services throughout a product's lifespan, when available, to maintain optimal performance and help drive better patient outcomes.

Our refurbishment programs involve an extensive inspection and testing process, designed to bring equipment back to its original certified manufacturing specifications. If the system is not suitable for refurbishment, eligible parts are harvested for reuse after quality and performance testing, while the remaining parts are returned to dedicated recycling facilities.

Guidance for end of lifecycle

Equipment instructions are provided to minimize the environmental impact for disposal or recycling.

Upgradeable hardware and software options are provided as a solution to extend the product lifespan.

Options may be offered to extend the product lifespan.

Parts harvesting and refurbishment options are provided to reduce waste and environmental impacts while extending imaging access to less advantaged regions.

OEC C-arms are eligible for assessment through the refurbishment program, in which they are assessed for refurbishment, harvesting, or recycling at the appropriate time in the lifespan.⁸

95% of OEC C-arms are reused, refurbished, or recycled, extending the lifetime of each product.⁸

Waste reduction

This system is in accordance with Waste Electrical and Electronic Equipment (WEEE) regulations.

⁸ System parts are eligible for refurbishment, although whether a system is actually refurbished versus harvested for parts or otherwise recycled or reused, is dependent on the state of the system when GE HealthCare takes possession of it.

Digitizing healthcare through transformative innovations for a more resilient tomorrow

We are committed to investing in digital capabilities that help accelerate clinical decision making, optimize imaging operations, and drive efficiencies in exam workflows, all of which can improve patient outcomes. Enabling digital transformation will further enhance our predictive and maintenance service operations for the life of your products.

We are also dedicated to driving a more resilient and sustainable future in healthcare. Many factors, including the pandemic, climate-related weather disasters, and supply-chain issues amplified this need. Managing operations through these challenges requires resilience and perseverance.

Helping clinicians advance patient outcomes

Advanced applications and cutting-edge tools provide personalized data to drive actionable insights, helping healthcare professionals make fast, accurate clinical decisions for care pathways.

Enable clinicians to visualize during procedures with clear images

Numerous innovations in technology and image processing are designed into the OEC 3D to deliver precise 3D and 2D images with true versatility and efficiency in operating rooms. Notable innovations include the following features:

- True 3D/2D versatility on a lightweight C-arm and simple, intuitive interface for capturing 2D and 3D cone-beam images intraoperatively in minutes;
- Large 19 cm x 19 cm x 19 cm volume—67% greater volume than other 3D C-arms—for viewing anatomical levels in the spine, maxillofacial, orthopedic trauma, or pulmonary biopsies;
- Five 3D volume reconstructed images presented on a 32” 4K UHD display for a precise and simultaneous view of axial, coronal, sagittal, volume rendering, and maximum intensity projection;
- Volume Viewer, a suite of 3D imaging tools based on GE HealthCare’s proven AW image fabric technology, including Multi Oblique Mode for assessing hardware alignment, scrolling through slices, rotate, zoom, and more;
- OEC Open, an open platform enabling seamless integration with navigation and robotics systems.

Helping clinicians advance patient outcomes

Enable clinicians to visualize during procedures with clear images

- Live View to position detector on patient anatomy with a real-time view, eliminating the need for scout images for enhanced communication while positioning the C-arm;
- Renowned 2D image processing with advanced features, including Live Zoom that offers 4X image size with no change in technique, one-button selection of Preset Profiles for anatomical image optimization, and 30% less noise during vascular and cardiac imaging with eNR (enhanced Noise Reduction);⁹
- Live Zoom that digitally zooms up to 4X larger during a fluoro shot, Cine run, subtraction, or roadmap while using the same dose rate as normal images and less dose compared to images in Mag mode; and
- Preset Imaging profiles designed to enhance view of anatomy based on procedure, including a Pediatric profile that automatically reduces dose by up to 50%.

⁹ Based on GE HealthCare study of OEC 3D imaging results with application of enhanced noise reduction algorithm.

Optimizing imaging operations

Our advanced digital solutions are designed to increase efficiencies across the radiology spectrum without increasing the administrative and training burden on radiologists and technologists.

Reduce downtime

System is efficient to set up with a quick boot-up time of less than a minute and Smart Connect, which enables patient data to be entered into the workstation while the C-arm is being positioned around the patient table and not yet connected.

Ease of use

In addition to less physical strain, the OEC 3D C-arm user interface is intuitive with OEC recognizable icons, colors, and layout and quick access to functions during procedures, including X-ray controls, Live Zoom, Digital Pen, measurements, annotations, laser aimers, image directory, preset imaging profiles, and more. A user interface is also available on an optional rollstand for control when and where desired.

Cybersecurity

GE HealthCare's Design Engineering Privacy and Security (DEPS) process follows GDPR, HIPAA, NIST 800-53, NIST 800-30, ISO 27001, and NIST CSF requirements.

Cleanability

Our equipment is designed to be cleaned and disinfected easily. We continue to test and approve new cleaning and disinfecting agents. Visit [Cleaning.GEHealthCare.com](https://www.gehealthcare.com/cleaning) for updates.
