

# Sustainable women's health ultrasound solutions for a resilient tomorrow

Voluson™ SWIFT Ultrasound

# Creating a more sustainable future requires we care for the planet and its inhabitants.

It is essential that we continue to drive progress toward early, precise, and accessible diagnosis and treatment of more patients. For the planet, it is critical that we do so with a reduced impact on precious and rare resources that are imperative to life. We believe that the advancement of precision health, greater digitization of healthcare, and increased access to quality care are fundamental to accomplishing this goal.

We support carbon policies that reduce greenhouse gas emissions and promote sustainable development. We are committed to achieving net zero by 2050 and are part of the UN-backed “Race to Zero,” with a goal of reducing emissions based on the Paris Agreement. We’ve also set a public goal to achieve a 50% reduction in our own operational emissions by 2030. As a result of these efforts, we want to enable a more sustainable health system by addressing not only the environmental impacts of our products but also the challenges healthcare professionals and their patients face with resilient, digital options.

We are committed to achieving **net zero** emissions by 2050.

We’ve set a public goal of a **50% reduction** in our own operational emissions by 2030.

**We deliver sustainable,  
intelligently efficient  
solutions for a resilient  
tomorrow.**

Building a healthier world to  
help improve access to care and  
enable better patient outcomes.

**Green**

Using fewer resources for a healthier planet.

**Digital**

Transforming healthcare through innovation.

**Resilience**

Building flexibility and dependability across healthcare systems.

## Voluson SWIFT ultrasound helps create a resilient tomorrow.

Voluson SWIFT ultrasound systems, along with their services, help ensure that women's health professionals and the patients they serve have the technology necessary to create a sustainable and resilient tomorrow.

### Reducing environmental impact

- Voluson SWIFT ultrasound systems are designed to be refurbished, reused, or recycled at the end of their product life to minimize unnecessary waste.

### Improving outcomes

- AI-based measurement tools reduce exam time and increase measurement accuracy.
- Uniquely intuitive and customizable, we've reimagined the user experience for a new level of ease and efficiency.
- Voluson Core Architecture delivers exceptional imaging effortlessly in all imaging modes.

# Contributing to a healthier planet

**More than half of the healthcare sector’s climate footprint, approximately 53%, is attributable to energy use.**<sup>1</sup> As a result, we have strengthened our commitment to environmentally conscious design and sustainable practices across our product manufacturing, sourcing, distribution, installation, and service operations. This includes improving energy efficiency, optimizing the use of limited or rare materials, providing digitally enabled and remote predictive and maintenance service throughout the product lifespan, and offering refurbishment and recycling options at the end of product life.

**GE Healthcare environmental management system is ISO 14001 certified**

Our production and service operations align to ISO 14001 standards.

**We’re committed to environmental product design**

Voluson SWIFT conforms with IEC60601-1-9:2007.

## Materials

GE Healthcare reviews the environmental aspects of the material supply used within our products to increase recyclability and decrease the use of hazardous substances, when possible.

### Recyclable

Approximately 55% of the basic Voluson SWIFT console consists of raw materials that can be recycled:

- Steel: 17.97 kg / 32.1%
- Aluminum: 16.47 kg / 29.4%
- Others: 21.56 kg / 38.5%

### Packaging Voluson SWIFT:

Packaging material is recyclable and certified for FSC Chain of Custody by Cheil, a Tier 2 supplier.

We’re committed to high recyclability of our products and reuse when possible.

### Reduce the use of hazardous substances

All Voluson consoles comply with the European RoHS Directive 2011/65/EU including Commission Delegated Directive (EU)2015/863.

All Voluson consoles comply with the REACH Regulation (EC) No 1907/2006.

<sup>1</sup> Health care climate footprint report | Health Care Without Harm (noharm-uscanada.org)

## Packaging and distribution

GE Healthcare imaging equipment has a robust and multi-sourced supply chain for systems and spare parts across all product portfolios.

### Improved packaging

Reusable packaging is used for all Voluson consoles.

GEUK achieved ISO14021 Type II self declarations. Specifically, packing material is the recycled content: Minimum 30% applied to all products produced by GEUK

---

**Product transportation** Air Transport: 99%  
Ocean: 1%

**99% product transportation utilizes low environmental impact modes**

## Manufacturing

Through our environmental reviews, we also focus on implementing renewable energy and reducing waste.

### Reducing electricity

Voluson SWIFT ultrasound systems are manufactured in our Seoul, Korea, site.

The 2021 energy usage at this facility was:

Electricity: 70.35 kW

Gas: 25.64 mJ (7.12 kW)

Water: 0.239 m<sup>3</sup>

## Product utilization

Our imaging products are designed to help enable energy efficiency through dedicated features and advanced applications to reduce the environmental impact.

## Ergonomically designed

### Reduce staff burden

Operators and clinicians can adjust Voluson SWIFT ultrasound systems for comfort and ease of use. The user interface of Voluson SWIFT is adjustable in two dimensions:

- Swivel left-right: +/- 70° from center
- Lift up-down: 200 mm (7.9 inch)

Handheld conforming shapes of ultrasound probes have been ergonomically designed to:

- Handle and manipulate with ease
- Connect to the system with one hand
- Be lightweight and balanced
- Have rounded edges and smooth surfaces

The foot switch, available as an option, is used for comfortable system control when no hand is free.

### Noise Level

Typical acoustic noise: <38.7 dBA

## Product utilization (Cont.)

### Guidance for product utilization

Instructions are provided for use of the equipment to minimize the environmental impact during installation, use, and operation.

### Reduce energy consumption during use

A screen saver can be set to appear after a definable period of inactivity.

When in Auto Scan Stop, freeze mode is activated after five minutes of inactivity.

After an hour of inactivity, the system automatically activates freeze mode, even when Auto Scan Stop is not enabled.

Standby mode uses 96.5% less energy than ready-to-scan mode and more than 97% less energy than scan mode.

Standby mode: 1.8 W  
Non-scan mode: 103 W  
Scan mode: 130 W

### Power consumption

There are zero direct carbon emissions at place of use.

## End of product life

We are increasingly putting our retired products' materials back into the supply chain to maximize efficient use and minimize unnecessary waste. This circularity model enables our imaging products to extend their clinical impact through longer lifespans while reducing the environmental footprint. Additionally, we offer our customers partnered support for upgrades and services throughout a product's lifespan to maintain optimal performance and help drive better patient outcomes.

Our refurbishment programs involve an extensive inspection and testing process, designed to bring equipment back to its original certified manufacturing specifications. If the system is not suitable for refurbishment, eligible parts are harvested for reuse after quality and performance testing, while the rest are returned to dedicated recycling facilities.

## Product utilization (Cont.)

**Guidance** Equipment instructions are provided to minimize the environmental impact for disposal or recycling.

**Upgradeable hardware and software options are provided as a solution to extend the product lifespan.** Upgrades are available for Voluson SWIFT.

**Parts harvesting and refurbishment options are provided to reduce waste and environmental impacts while extending imaging access to less advantaged regions.** 94–96% of most systems are reused, refurbished, or recycled, extending the lifetime of each product.<sup>2</sup>

Voluson SWIFT ultrasound system parts are eligible for assessment through the refurbishment program, in which they are assessed for refurbishment, harvesting, or recycling at the appropriate time in the lifespan.<sup>3</sup>

100% of Voluson SWIFT ultrasound consoles are eligible for refurbishment.

**Waste reduction** This system is in accordance with Waste Electrical and Electronic Equipment (WEEE) regulations.

<sup>2</sup> Products within ultrasound are eligible for refurbishment, although whether a system is refurbished versus harvested for parts or otherwise recycled or reused is dependent on the state of the system when GE Healthcare takes possession of it. Data on file.

<sup>3</sup> Products within ultrasound are eligible for refurbishment, although whether a system is actually refurbished versus harvested for parts or otherwise recycled or reused is dependent on the state of the system when GE Healthcare takes possession of it.

## Digitizing healthcare through transformative innovations for a resilient tomorrow

We are committed to investing in digital capabilities that help accelerate clinical decision making, optimize imaging operations, and drive efficiencies in exam workflows, all of which can improve patient outcomes. Enabling digital transformation will further enhance our predictive and maintenance service operations for the life of your products.

**We are also dedicated to driving a more resilient and sustainable future in healthcare.** Many factors, including the pandemic, climate-related weather disasters, and supply-chain issues amplified this need. Managing operations through these challenges requires resilience and perseverance.

### Advancing clinical outcomes

Advanced applications and cutting-edge AI tools provide personalized data to drive actionable insights, helping healthcare professionals make fast, accurate clinical decisions for care pathways.

#### Gain actionable clinical insights quicker for earlier diagnosis

Voluson SWIFT has several AI tools to help with the consistency and completeness of exams.

---

Incorporating AI, SonoCNS, and SonoBiometry helps properly align and display recommended views plus measurements of the fetal brain.

---

The SonoLyst AI feature automatically identifies fetal anatomy seen on standard views then selects all applicable annotations and measurements.

---

#### Keep your imaging equipment up to date with advanced clinical applications

Voluson SWIFT ultrasound system software updates and upgrades are available to customers via media or eDelivery.

## Optimizing imaging operations

Our AI-based and advanced digital solutions are designed to increase efficiencies across the radiology spectrum without increasing the administrative and training burden on radiologists and technologists.

### Increase productivity and consistency

iCenter™ analytics provides insights for hospital managers to improve operational performance, asset utilization, and asset performance.

### Reduce downtime

GE Healthcare's predictive analytics tools reduce downtime, optimize workflow, and reduce service interventions. iCenter analytics tracks metrics and delivers data on equipment status, maintenance history, and performance to help reduce downtime.

The remote service platform InSite™ connects you with a GE Online Service Engineer or Applications Support Engineer. It has remote diagnostics capability as well as the ability to request service. Request for Service via the InSite link. Available in some markets.

Software updates may be available for download via media or eDelivery.

### Cybersecurity

GE Healthcare's Design Engineering Privacy and Security (DEPS) process follows GDPR, HIPAA, NIST 800-53, NIST 800-30, ISO 27001, and NIST CSF requirements.

## Enabling intelligent exam workflows

Intelligent automation features help drive consistency, enable fast, easy exams, and improve workflow with fewer resources, all while achieving similar or improved outcomes.

### Reduce setup time

Users can easily access patient information from an external Worklist Server.

Voluson SWIFT has a customizable touch panel which allows the user to organize the display in the most efficient way for them.

### Reduce exam time

A suite of applications is designed to improve workflow and can substantially reduce keystrokes and analysis time, leading to increased efficiency and shorter exams.

### Ease of use

SonoFHR reduces keystrokes through automatic caliper placement up to 85.7%

SonoCNS can help reduce unnecessary keystrokes by 82%.

Flow Profiles offer a 64% keystroke reduction and 56% decrease in Doppler exam time when compared to manual workflows.

### Cleanability

Our equipment is designed to be cleaned and disinfected easily. We continue to test and approve new cleaning and disinfecting agents. Visit [Cleaning.GEHealthcare.com](https://www.gehealthcare.com/cleaning) for updates. This includes validated cleaning and disinfection instructions for probes.

**Building a healthy world to help enable better patient outcomes.**

GE Healthcare is a member of COCIR, the European Trade Association representing the medical imaging, radiotherapy, health ICT, and electromedical industries.<sup>4</sup>
