

ViewPoint™ 6

Point of Care Ultrasound

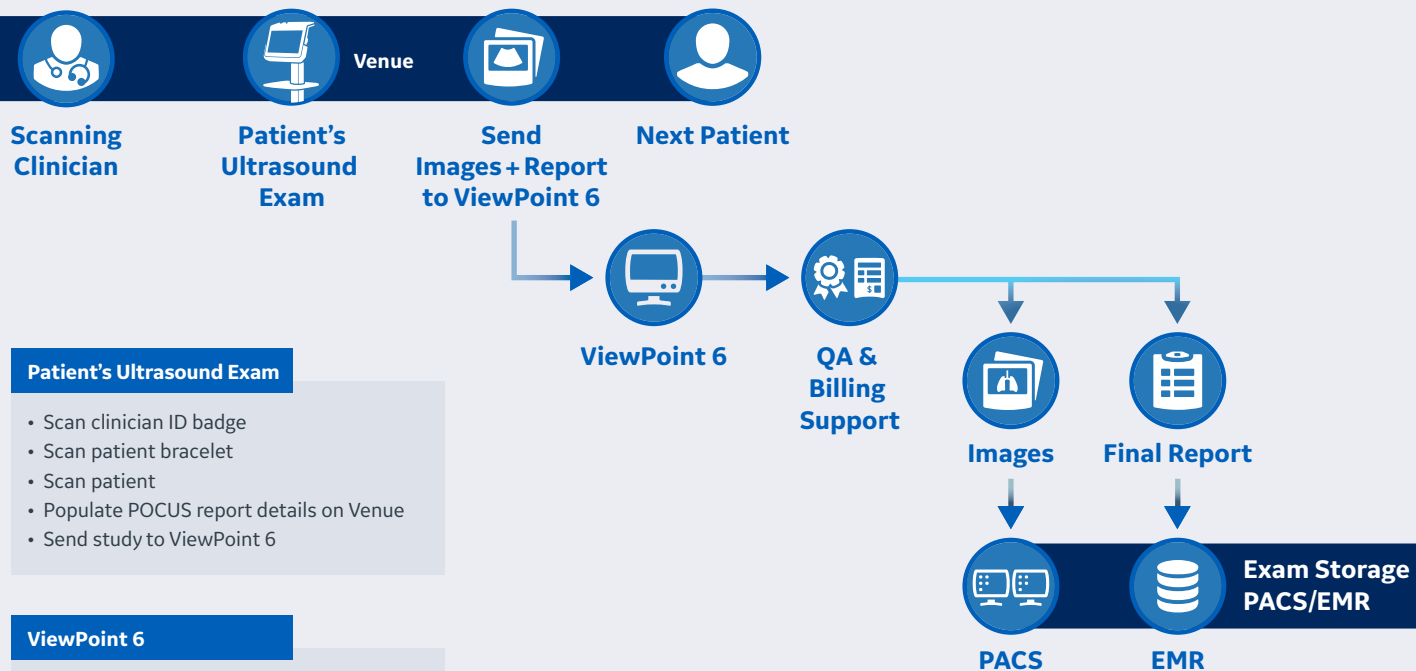

Simple. Efficient. Automated.

Accelerate and Automate Ultrasound Workflows at the Point of Care

Streamlined Workflows

Patient's Ultrasound Exam

- Scan clinician ID badge
- Scan patient bracelet
- Scan patient
- Populate POCUS report details on Venue
- Send study to ViewPoint 6

ViewPoint 6

- On ViewPoint 6, finalize report
- ViewPoint 6 sends the report to EMR and image to PACS
- Perform QA

*Supports credentialed and non-credentialed workflow
QA can be done at any time*

Capture data quickly and accurately in your Emergency Department (ED)

In the Emergency Department (ED), every minute counts. ViewPoint 6 gives you an intuitive workflow solution for fast and accurate ultrasound reporting where and when you need it. The ViewPoint 6 Point of Care Ultrasound (POCUS) module, together with the Venue™ family of ultrasound products, facilitates order creation, documentation and archiving of ultrasound studies for patients in need of urgent care.

Create ultrasound reports easily

Save time by starting your reporting directly on your Venue ultrasound scanners. Exam findings and images are automatically transferred to ViewPoint 6, and from there to your EMR and PACS. With just a few clicks, you have consistent, accurate, and reliable reports quickly available for colleagues, enabling seamless continuity of care. The ViewPoint 6 POCUS module integrates with on-scanner exam templates on Venue systems and receives images from ultrasound systems via DICOM to deliver a connected reporting and image management solution—an innovation in Point of Care.

Improve patient flow and outcomes

From the moment you start the ultrasound exam, the ViewPoint 6 POCUS module and Venue family systems help you simplify workflow and minimize the manual steps that slow down an exam. Scan the clinician's ID badge and barcode on the patient's wristband to support exam order creation and automatically populate information into your report. Input findings, store images and document each exam with customizable reporting templates. ViewPoint 6 helps to take your focus off time-consuming administrative tasks and keeps it where you want it—on patient care and outcomes.

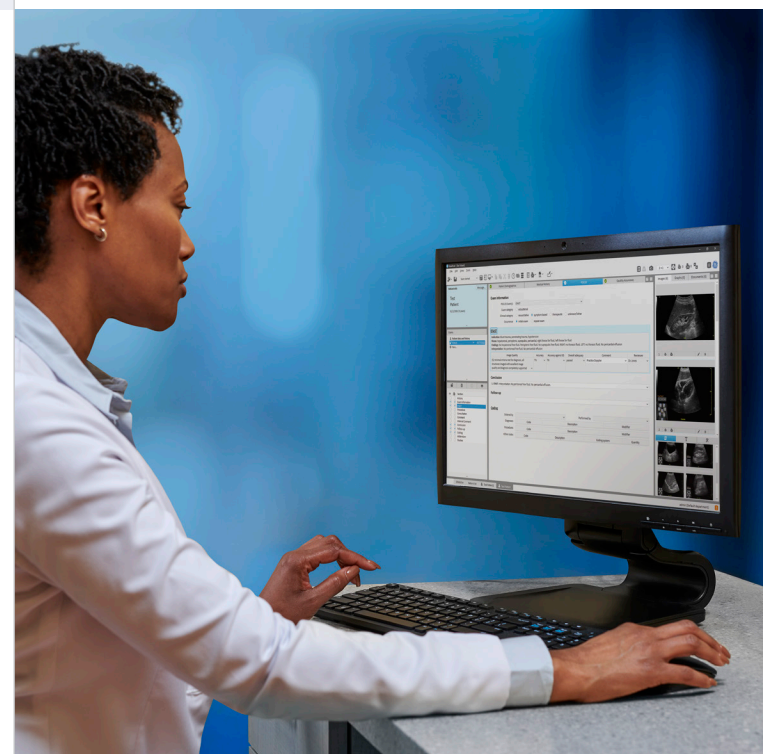

Experience matters

Having a simple way to document accurate, real-time clinical information in a standardized report not only improves ED efficiency, but also ensures consistency and clarity in reporting and minimizes variation in care. ViewPoint 6 reports are based on over 25 years of customer feedback and cooperation with healthcare providers and medical societies.

Support ultrasound QA, credentialing, and billing

Increase your ultrasound capabilities within your ED with the help of ViewPoint 6 POCUS. The module is aligned with medical guidelines and allows for QA documentation, while keeping track of the type and number of every exam each health care provider performs, facilitating ultrasound Quality Assurance (QA) and credentialing. In addition to maintaining statistics on the number and type of exams, the ViewPoint 6 POCUS module supports coding and billing for your ultrasound services.

With your expertise along with ViewPoint 6 and the Venue family of products, you have everything you need to maximize efficiency in ED ultrasound, improve patient care, and increase revenue potential.

ViewPoint 6 has been used by healthcare providers for decades and continuous updates are available to align with the latest technology. While designed to work seamlessly on-board the Venue family of products, the ViewPoint 6 POCUS reporting module can easily be used in a mixed scanner environment by documenting the full report at the workstation.

Our team of knowledgeable IT and ultrasound professionals are available to support you through the installation process, training, and beyond.
