

Global Information Security Management System

Global Information Security Management System

ISO 27001, 27018, and 27701 Certified

In today's highly connected world, maintaining the security of our systems and the privacy and integrity of the data they hold is our top priority. At GE HealthCare, we continuously adapt our data protection strategy in the face of growing cybersecurity threats and expanding data protection laws and industry expectations.

You can trust GE HealthCare to protect your data, and here's why: We standardized the scope of our Global Information Security Management System (ISMS) to include all service activities, infrastructure, and assets capable of accessing your data. Our ISMS is globally certified according to **ISO 27001, 27018, and 27701 standards**.

This certification, awarded by an independent body, provides third-party assurance that GE HealthCare meets the stringent requirements of 27001, giving you confidence that we take information security seriously.

ISO 27001: summary of scope

The Information Security Management System for the protection of Customer System Personal Information during the provision of GE HealthCare product installation, maintenance, demonstration, training and hosting globally in accordance with Statement of Applicability, Revision 1, dated 28 July 2023.

Certificate ID: IS 774227
Issued by BSI

How our certifications benefit you

Sensitive Data Protection

GE HealthCare's Services personnel may encounter sensitive information, including patient information. Our ISO certifications are evidence of adherence to our data protection security policies.

Regulatory Compliance

ISO 27001, 27701, and 27018 help ensure that applicable laws and regulations, such as HIPAA, GDPR, LGPD, and MLPS, are considered when implementing policies and procedures relevant to our ISMS.

Industry Gold Standard

The ISO 27000 series is a globally recognized standard for information security management. Certification demonstrates GE HealthCare's commitment to protecting sensitive information by implementing a comprehensive set of information security controls and adopting a systematic approach to managing and protecting all assets.

With ISO 27000 series certification, you get:

Risk-based Approach:

We provide a framework for identifying and mitigating information security risks. By implementing the standard, the likelihood and impact of security incidents is reduced.

Confidence:

GE HealthCare is committed to adhering to global standards for information security. This certification enhances trust in our ability to safeguard your sensitive data effectively.

Continuous Improvement:

We continually adapt to changes in the threat landscape and to the needs of our stakeholders, and certification ensures that those adaptations remain effective.

Assurance:

With this standardized and objective measure of information security capabilities, external auditors regularly assess GE HealthCare's ISMS performance against the standard.

Data Protection Details During the Service Life Cycle

GE HealthCare's ISO 27001-certified ISMS covers people, connections, data flows, systems, and data processing centers at all GE HealthCare sites worldwide. When you grant us access to your data – from demonstration to training, installation, and maintenance – it is protected with appropriate technical and organizational controls.

Evaluations

Product evaluations are an important step in the assessment of medical products prior to purchase. If your data is placed on a system during evaluation and subsequently returned to GE HealthCare, it is fully protected by the technical and organizational controls of our ISMS.

Installation

GE HealthCare is committed to upholding the confidentiality and integrity of systems and data during the installation process. Our ISMS is designed to support these efforts by implementing the full range of ISO 27001, 27018, and 27701 controls, covering employee actions and tools for enhanced protection.

Education

GE HealthCare provides both on-site and remote training to your personnel if they use our products. When providing training, the GE HealthCare ISMS covers activities in which there could be visibility to sensitive data and provides the appropriate level of protection.

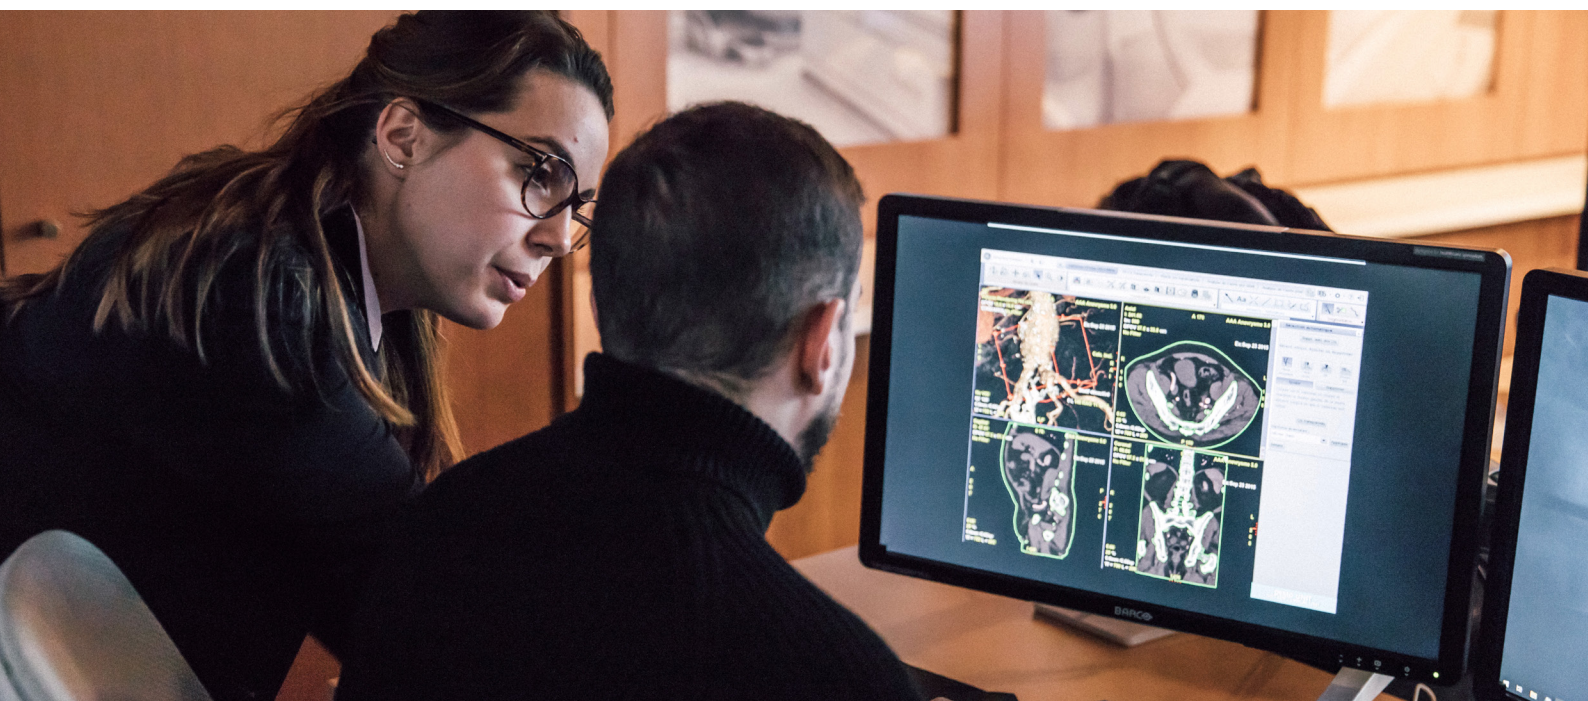

Maintenance

GE HealthCare products may require on-going maintenance and support from our trained and qualified employees. On-site support will be performed only by trained and qualified engineers where all relevant activities are governed by our ISMS.

An additional key element of delivering efficient, effective, and timely support involves remote connectivity. Our approved remote connectivity solutions are governed by our ISO 27001 certification and provide a controlled and secured connection between you and GE HealthCare's trained and qualified engineers.

This approach helps to ensure that we protect any data that we may encounter while providing critical support.

The ISMS Scope for Core Data Flow
