

Edison

Intelligence to Enable Better Patient Care

Edison is GE Healthcare's intelligence platform designed to help you achieve greater efficiency, improve patient outcomes and increase access to care. Edison invisibly augments workflows to help you deliver the most personalized patient care possible.

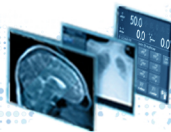

« Powered by Data

Vast amounts of data accompany every patient's journey. Edison enables us to integrate and assimilate data from disparate sources and apply analytics or advanced algorithms to generate clinical, operational and financial insights.

Creating Insight

Drawing on deep domain expertise, the Edison platform offers an extensive catalog of healthcare-specific services that enable rapid and compliant design, development and deployment of secure applications and algorithms.

« Intelligent Applications

We currently offer more than 50 applications that span clinical service lines. Developed internally and with our clinical partners, Edison applications leverage analytics, machine learning, deep learning and AI to enhance decision making.

Deployment Agnostic

Providing intelligence when and where you need it, Edison solutions can be securely deployed via Cloud or Edison HealthLink, or seamlessly embedded into smart devices across the entire spectrum of your enterprise.
