

Digital Expert Access

Peer-to-peer collaboration anytime, anywhere

gehealthcare.com

Improved exam workflow efficiency is imperative.

Cost pressures and resource scarcity have intensified the need for greater collaboration across multiple sites of service and access to in-house expertise.

Timely assistance may help avoid quality issues, rework and other delays in the exam workflow. By guiding exams in real time, the disruption of rescheduling patients or the need to send patients to other sites is reduced.

Multi-site locations

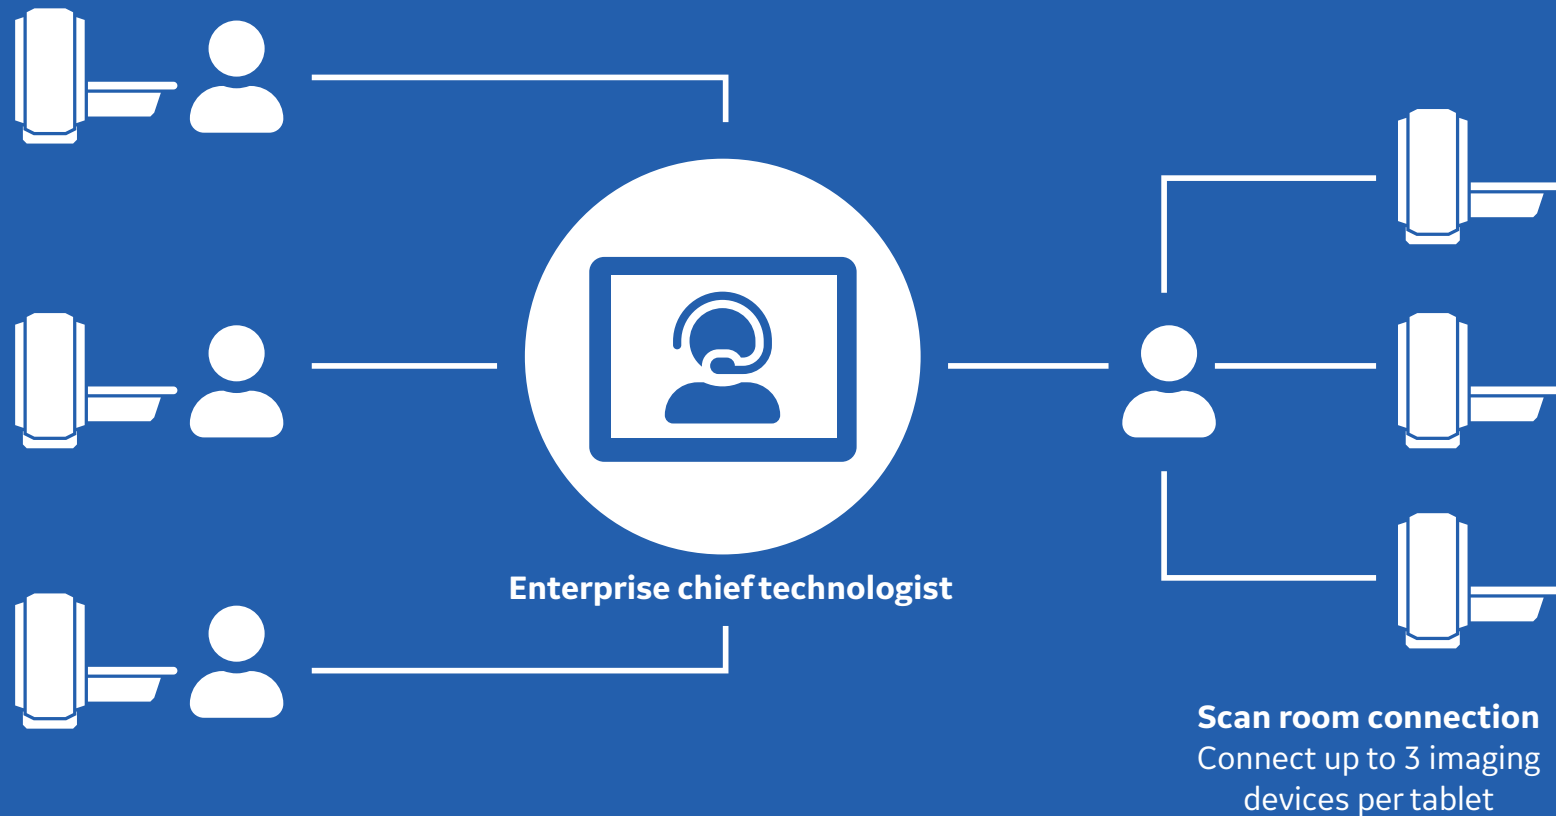

Collaboration Challenges

Technologists may need help to perform uncommon, complex or rare procedures to avoid rescheduling of patients or the need to send them to other sites.

Sharing expertise improves staff efficiency, skills and satisfaction.

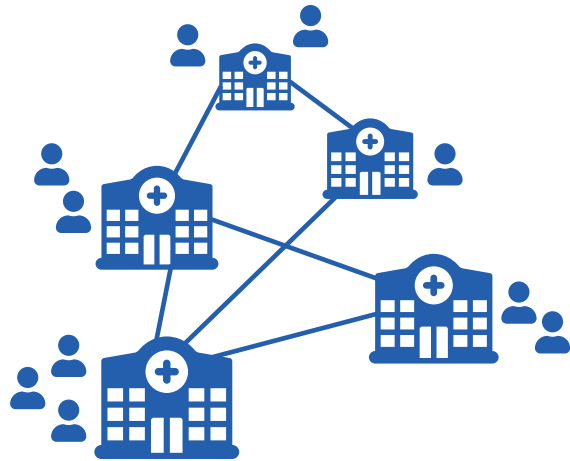

Peer-to-peer collaboration when your technologist needs it most.

Digital Expert Access is a real-time, virtual solution that enables collaboration among all your radiology teams, within a single hospital or across multiple locations. Easily share expertise and best practices or remotely access key controls in the scan room to provide immediate help.

Collaboration and connectivity

The ability to seamlessly bridge multiple locations, users and devices enables technologists to share knowledge, helping to improve exam workflows, speed up decision-making and achieve clinical and efficiency goals. Easy and regular collaboration can potentially help improve patient and staff satisfaction.

10 Users can connect in a live session¹

3 Devices can connect from each tablet¹

"[Remote scanning assistance] is helpful for more advanced procedures. It saves time for everyone"

— US technologist
