### Summary

The following information is provided to GE Healthcare Technologies customers in regards to known technical security vulnerabilities associated with Mac-Lab® Hemodynamic, CardioLab® Electrophysiology, SpecialsLab and ComboLab IT Recording Systems for Cath Lab, EP Lab and other interventional labs as well as the Centricity® Cardiology Data Management Systems.

### Security Patch Base Configuration

The security patch base configuration of the Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi product at release is listed within the MLCL Base Configuration under the Hemodynamic, Electrophysiology and Cardiovascular Information Technologies section of the [http://www3.gehealthcare.com/en/Support/Invasive\\_Cardiology\\_Product\\_Security](http://www3.gehealthcare.com/en/Support/Invasive_Cardiology_Product_Security) website.

### Process

The following actions are taken whenever Microsoft/OEMs releases new security patches:

- The Invasive Cardiology Engineering Team performs a security analysis process for supported Mac-Lab IT/XT/XTi, CardioLab IT/XT/XTi, GE Client Review and INW Server hardware/software.

## GE Healthcare

- If a vulnerability meets Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi validation criteria, the vulnerability is communicated through the GEHC Product Security Database and Invasive Cardiology Security Website within Three weeks of the patch release.
- Upon validation of the Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi vulnerability, the GEHC Product Security Database and Invasive Cardiology Security Website and affected Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi Security Patch Installation Instructions are updated.

The Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi vulnerability validation criteria are as follows: Any vulnerability that allows malware to alter or deny Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi functionality and/or infect and propagate through normal system use.

Customers are responsible to stay informed with Microsoft vulnerability notifications and to visit the Invasive Cardiology websites to understand the Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi impact. Once a security patch is validated, customers are responsible for the installation of security patches. All Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi Security Patch Installation Instructions are available on the Invasive Cardiology Security Website below the Validated Patches table.

Vulnerabilities exposed after the Mac-Lab IT/XT/XTi and CardioLab IT/XT/XTi product release which do not meet the criteria to be validated are not listed within the GEHC Product Security Database and Invasive Cardiology Security Website. These vulnerabilities are deemed to be non-critical and/or outside normal clinical workflow of the Mac-Lab IT/XT/XTi, CardioLab IT/XT/XTi and Centricity INW systems and will not be validated. Unlisted patches should not be installed on the products in order to eliminate malfunction and breakdown risks.

## Patch Links

The patches displayed below are qualified on an independent basis and can be installed on a one-by-one basis, although it is recommended that all qualified patches are installed. There are dependencies within the qualified patch list. In the table below, it is recommended the patches are installed in order from top to bottom to ensure all pre-requisites are met for all patches. On occasion the patch dependencies require system reboots which are identified in the table below.

**NOTE:** Due to site configurations, system patch set, qualified patches which have been installed previously or patch dependencies, some patches could fail to install due to the functionality is already installed. The Microsoft patch installer will alert you to this issue. If this occurs, please continue with the next patch installation.

**Alternate Patch locations:** In early 2016 Microsoft announced that some patches would no longer be available on the Microsoft Download Center <https://blogs.technet.microsoft.com/msrc/2016/04/29/changes-to-security-update-links/>. Therefore, some of the links provided below may not work. Microsoft may move/remove these links at any time without notice. However, if the links do not work, there are two alternate methods for downloading patches. The first is the Microsoft Catalog <http://catalog.update.microsoft.com>. Most fixes not on Microsoft Download Center will be available from the Microsoft Catalog. If a fix is not available from the Microsoft Catalog, Microsoft has monthly ISO files of the security updates available at <https://support.microsoft.com/en-us/kb/913086>. To use the ISOs, determine the month of the patch, download the applicable ISO and extract the patch. If after exhausting all three methods, you are still unable to obtain a patch, please contact GE Technical Support for further assistance.

**Recommendation:** Use Internet Explorer (IE) for Catalog download. If you are using the cart feature to download patches, to see the cart it requires opening another tab or new window for <http://catalog.update.microsoft.com>

## 6.9.6 R1 Patch Installation Paths

There are two installation paths

- Old Procedure
- New Procedure

The New procedure was developed to remove patch redundancy and streamline the patch installation for 6.9.6R1. To provide a transition both the Old and the New procedures will be supported for patch releases. Either procedure can be used and the results will be the same. However, it is extremely important that you fully complete one of these procedures to ensure you are at a common baseline to apply any future patch updates. If you have been following the old procedure then most likely will want to continue to follow it for this patch refresh. But if you are applying patches for the first time or are reimaging the system from a disaster recovery, the use of the New Procedure will be your quicker and preferred path.

The following sample scenarios are provided for reference.

- (1) New Setup/Reimage a machine for disaster recovery.
  - (a) Apply the updates from the following sections
    - (i) MLCL v6.9.6 R1 only (New Procedure)
- (2) The machine was setup and patched. Need to patch recently qualified patches.
  - (a) Apply the updates from the following sections
    - (i) Verify that all patches from section **MLCL v6.9.6 R1 only (Old Procedure)** have been applied. Install any unapplied patches
    - (ii) MLCL V6.9.6 2017 Patch Updates 1 (if patches from this section were previously not applied)
    - (iii) MLCL V6.9.6 2017 Patch Updates 2 (if patches from this section were previously not applied)

Post installation of patches using the scenarios (old or new procedure) described above patches from following sections should be installed:

- (i) MLCL V6.9.6 2017 Patch Updates 3 (if patches from this section were previously not applied)

Note: The section MLCL Optional Security Updates applies to both scenarios. The optional updates provide additional security but are not required. You may apply some of the optional patches but choose to bypass others. For example, you may want to disable some of the vulnerable protocols but you may not want to address Weak Hashing due to cost and complexity of certificate management. This will not cause problems. However, **all other updates are strongly recommended.**

Some updates are documented as superseded. These are left in the document for completeness but can be skipped.

## MLCL V6.9.6 2017 Patch Updates 1

Page 43 of 76

GE Healthcare/1 November 2018

## GE Healthcare

The following patches bring the MLCL system to a more recent patch level and address several security vulnerabilities. The following guidelines apply:

1. The above patches are required patches for 6.9.6 and must be applied first.
2. It is expected that some patches listed will already be on the system.
3. Pay attention to the Notes section for special handling instructions
4. Patches must be applied in order except where indicated.
5. Reboots are only required where indicated. If a Patch requests a reboot at another point, the system can be rebooted but it is not required.
6. Patches will not install if the software component to be patched is not present (such as an IE8 patch on a system that does not have IE8 installed).

**Note:** KB4022719 replaces KB4012215 and KB4019263 for both Windows 7 and Windows Server 2008 R2 to address CVE-2017-8543, CVE-2017-8544, CVE-2017-0277, CVE-2017-0276, CVE-2017-0275, CVE-2017-0274, CVE-2017-0272, CVE-2017-0271, CVE-2017-0270, CVE-2017-0269, CVE-2017-0268, CVE-2017-0171, CVE-2017-0280, CVE-2017-0279 and CVE-2017-0278.
