

Testing Policy – Centricity™ Partner Program

Version Date: August 18, 2016

The Centricity Partner Program is a company-level recognition effort combining comprehensive benefits for organizations that complement GE Healthcare Digital solutions.

All companies applying for the Centricity Partner Program are required to complete a testing process to demonstrate the quality of their offerings. All applications should go through the Centricity Partner Program Test Management System Portal provided to partners by GE Healthcare for approval and testing process tracking.

The process for partner offering testing is described below and illustrated in table 1.0.

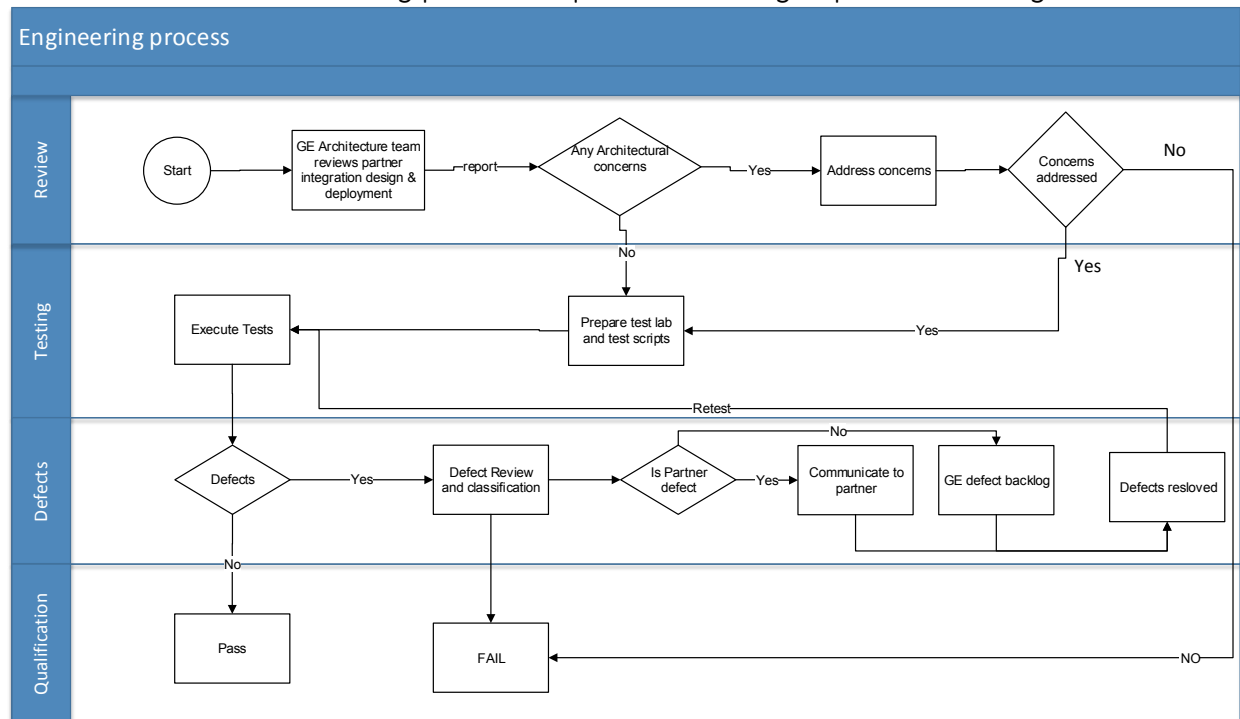

INCLUDED FEATURES:

Testing features	Descriptions
Review of the offering:	The GE Healthcare Architecture Team (contact: partner.engineering@ge.com) will review partner offerings' integration architecture design. All concerns raised by the GE Healthcare Architecture Team must be addressed appropriately before testing activities can start. Architecture concerns are treated as defects.
Testing of the offering:	<p>Testing involves test lab set-up, test script creation and test execution. The testing phase requires partner technical teams' involvement for lab set-up, product workflow walkthrough and test execution planning. The test execution results will be shared with the partner team.</p> <p>Scope: The GE Healthcare testing team will ONLY focus on interface testing between partner and Centricity products, in addition to any associated workflows. The following areas are out of scope and will not be tested: performance, security, reliability and testing for hosting.</p> <p>Testing Data: Testing will be done with GE Healthcare testing team's test data and partners should not provide any patient data or use any patient data for testing purposes.</p> <p>Re-testing: Any new version of the partner product that has an impact on the interface will be subject to partner program re-testing at an additional cost. Partner will not be responsible for any testing or costs associated with new versions of GE Healthcare products. The decision to re-test a new version (either the partner's product new version or GE Healthcare's product new version) will be jointly determined by partner</p>

	and GE Healthcare.
Defects management:	Defects found at any stage during the testing cycle must be resolved in order to pass the verification and to be qualified. Defects can be on either side of the integration. If it is a partner product defect, it will be communicated to the partner for corrective action. If it is a GE Healthcare product defect, it will be added to the respective product development plans. Temporary workarounds if available and acceptable to all stakeholders can be considered for the interim.
Qualification	All tests need to be completed.
