Reveal
a new wonderland of MR possibilities.

The secret of MAGiC (MAGnetic resonance image Compilation) lies in its unique ability to produce multiple image contrasts in a single neuro scan. We call this One & Done imaging, and its benefits are wide-ranging.

In addition, MAGiC expands the routine, providing complimentary parametric data for a more complete picture.

Go Faster, Further, Deeper with the power of MAGiC.

Faster

With MAGiC, you can acquire multiple image contrasts in just a few minutes. For instance, you can acquire T1, T2, PD, and Inversion Recovery based sequences in just a few minutes.

- **6 scans = 6 contrasts**
- **1 scan = 6 contrasts**

MAGiC: it’s MAGiC!

Further

MAGiC dramatically reduces the scan time required for a basic scan, giving you more time to do other imaging and stay active.

- **No multiple acquisitions**
- **No additional scan time**

MAGiC MR: it’s not just an image. It’s the full picture.

Deeper

Within the same single MAGiC scan, complimentary T1, T2, PD, R1, and R2 maps are acquired.

Additional acquisitions (ASL, Morphology, DTI and SWAN) acquired in the same amount of time as conventional.

Basic diagnostic acquisitions take over 15 minutes. To acquire parametric data, multiple independent sequences are required. With MAGiC, we ensure B1 uniformity to allow unique results through parametric T1, T2 and PD maps.

MAGiC: it’s not just an image. It’s the full picture.
