1. INTRODUCTION

1.1 OVERVIEW

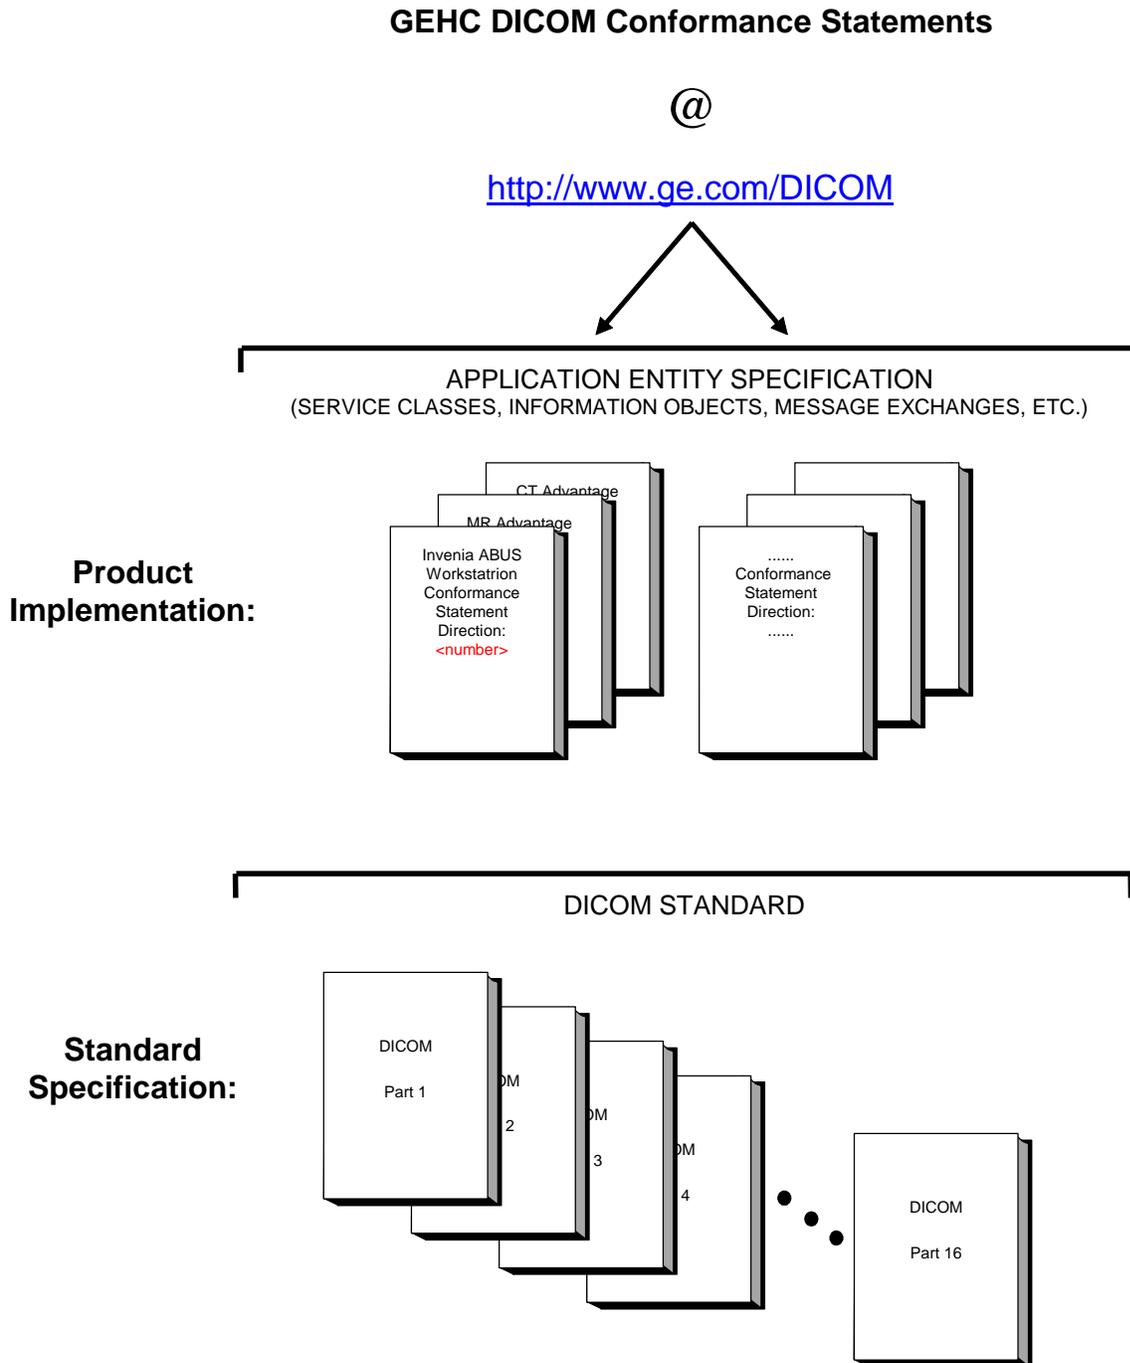

This DICOM Conformance Statement is divided into Sections as described below:

This DICOM Conformance Statement is written according to part PS 3.2 of the DICOM standard.

The application described in this conformance statement is the Invenia ABUS Viewer . The Invenia ABUS Viewer acts as SCU and SCP for the DICOM Storage and as SCU for DICOM Query/Retrieve.

1.2 OVERALL DICOM CONFORMANCE STATEMENT DOCUMENT STRUCTURE

The Documentation Structure of the GEHC DICOM Conformance Statements is shown in the Illustration below.

This document specifies the DICOM implementation. It is entitled:

Invenia ABUS Viewer 2.x.x
Conformance Statement for DICOM
Direction DDC1806201

This DICOM Conformance Statement documents the DICOM Conformance Statement and Technical Specification required to interoperate with the GEHC network interface.

The GEHC Conformance Statement, contained in this document, also specifies the Lower Layer communications which it supports (e.g., TCP/IP). However, the Technical Specifications are defined in the DICOM Part 8 standard.

For more information regarding DICOM, copies of the Standard may be obtained on the Internet at <http://medical.nema.org>. Comments on the Standard may be addressed to:

1.3 INTENDED AUDIENCE

The reader of this document is concerned with software design and/or system integration issues. It is assumed that the reader of this document is familiar with the DICOM Standard and with the terminology and concepts which are used in that Standard.

1.4 SCOPE AND FIELD OF APPLICATION

It is the intent of this document to provide an unambiguous specification for GEHC implementations. This specification, called a Conformance Statement, includes a DICOM Conformance Statement and is necessary to ensure proper processing and interpretation of GEHC medical data exchanged using DICOM. The GEHC Conformance Statements are available to the public.

The reader of this DICOM Conformance Statement should be aware that different GEHC devices are capable of using different Information Object Definitions. For example, a GEHC CT Scanner may send images using the CT Information Object, MR Information Object, Secondary Capture Object, etc.

Included in this DICOM Conformance Statement are the Module Definitions which define all data elements used by this GEHC implementation. If the user encounters unspecified private data elements while parsing a GEHC Data Set, the user is well advised to ignore those data elements (per the DICOM standard). Unspecified private data element information is subject to change without notice. If, however, the device is acting as a "full fidelity storage device", it should retain and re-transmit all of the private data elements which are sent by GEHC devices.

1.5 IMPORTANT REMARKS

DICOM by itself does not guarantee interoperability. However, the Conformance Statement facilitates a first-level validation for interoperability between different applications supporting the same DICOM functionality.

This Conformance Statement is not intended to replace validation with other DICOM equipment to ensure proper exchange of information intended.

The scope of this Conformance Statement is to facilitate communication with the ABUS Viewer and other vendors' of DICOM equipment. The Conformance Statement should be read and understood in conjunction with the DICOM Standard. However, by itself it is not guaranteed to ensure the desired interoperability and a successful interconnectivity.

The use of these DICOM Conformance Statements, in conjunction with the DICOM Standards, is intended to facilitate communication with GE imaging equipment. However, **by itself, it is not sufficient to ensure that inter-operation will be successful.** The **user (or user's agent)** needs to proceed with caution and address at least four issues:

- **Integration** - The integration of any device into an overall system of interconnected devices goes beyond the scope of standards (DICOM v3.0), and of this introduction and associated DICOM Conformance Statements when interoperability with non-GE equipment is desired. The responsibility to analyze the applications requirements and to design a solution that integrates GE imaging equipment with non-GE systems is the **user's** responsibility and should not be underestimated. The **user** is strongly advised to ensure that such an integration analysis is correctly performed.
- **Validation** - Testing the complete range of possible interactions between any GE device and non-GE devices, before the connection is declared operational, should not be overlooked. Therefore, the **user** should ensure that any non-GE provider accepts full responsibility for all validation required for their connection with GE devices. This includes the accuracy of the image data once it has crossed the interface between the GE imaging equipment and the non-GE device and the stability of the image data for the intended applications.

Such a validation is required before any clinical use (diagnosis and/or treatment) is performed. It applies when images acquired on GE imaging equipment are processed/displayed on a non-GE device, as well as when images acquired on non-GE equipment is processed/displayed on a GE console or workstation.

- **Future Evolution** - GE understands that the DICOM Standard will evolve to meet the user's growing requirements. GE is actively involved in the development of the DICOM Standard. DICOM will incorporate new features and technologies and GE may follow the evolution of the Standard. The GEHC protocol is based on DICOM as specified in each DICOM Conformance Statement. Evolution of the Standard may require changes to devices which have implemented DICOM. **In addition, GE reserves the right to discontinue or make changes to the support of communications features (on its products) described by these DICOM Conformance Statements.** The **user** should ensure that any non-GE provider, which connects with GE devices, also plans for the future evolution of the DICOM Standard. Failure to do so will likely result in the loss of function and/or connectivity as the DICOM Standard changes and GE Products are enhanced to support these changes.
- **Interaction** - It is the sole responsibility of the **non-GE provider** to ensure that communication with the interfaced equipment does not cause degradation of GE imaging equipment performance and/or function.

1.7 DEFINITIONS

Informal definitions are provided for the following terms used in this Conformance Statement. The DICOM Standard is the authoritative source for formal definitions of these terms.

Abstract Syntax – the information agreed to be exchanged between applications, generally equivalent to a Service/Object Pair (SOP) Class. Examples : Verification SOP Class, Modality Worklist Information Model Find SOP Class, Computed Radiography Image Storage SOP Class.

Application Entity (AE) – an end point of a DICOM information exchange, including the DICOM network or media interface software; i.e., the software that sends or receives DICOM information objects or messages. A single device may have multiple Application Entities.

Application Entity Title – the externally known name of an *Application Entity*, used to identify a DICOM application to other DICOM applications on the network.

Application Context – the specification of the type of communication used between *Application Entities*. Example: DICOM network protocol.

Association – a network communication channel set up between *Application Entities*.

Attribute – a unit of information in an object definition; a data element identified by a *tag*. The information may be a complex data structure (Sequence), itself composed of lower level data elements. Examples: Patient ID (0010,0020), Accession Number (0008,0050), Photometric Interpretation (0028,0004), Procedure Code Sequence (0008,1032).

Information Object Definition (IOD) – the specified set of *Attributes* that comprise a type of data object; does not represent a specific instance of the data object, but rather a class of similar data objects that have the same properties. The *Attributes* may be specified as Mandatory (Type 1), Required but possibly unknown (Type 2), or Optional (Type 3), and there may be conditions associated with the use of an Attribute (Types 1C and 2C). Examples: MR Image IOD, CT Image IOD,.

Joint Photographic Experts Group (JPEG) – a set of standardized image compression techniques, available for use by DICOM applications.

Media Application Profile – the specification of DICOM information objects and encoding exchanged on removable media (e.g., CDs)

Module – a set of *Attributes* within an *Information Object Definition* that are logically related to each other. Example: Patient Module includes Patient Name, Patient ID, Patient Birth Date, and Patient Sex.

Negotiation – first phase of *Association* establishment that allows *Application Entities* to agree on the types of data to be exchanged and how that data will be encoded.

Presentation Context – the set of DICOM network services used over an *Association*, as negotiated between *Application Entities*; includes *Abstract Syntaxes* and *Transfer Syntaxes*.

Protocol Data Unit (PDU) – a packet (piece) of a DICOM message sent across the network. Devices must specify the maximum size packet they can receive for DICOM messages.

Security Profile – a set of mechanisms, such as encryption, user authentication, or digital signatures, used by an *Application Entity* to ensure confidentiality, integrity, and/or availability of exchanged DICOM data

Service Class Provider (SCP) – role of an *Application Entity* that provides a DICOM network service; typically, a server that performs operations requested by another *Application Entity* (*Service Class User*). Examples: Picture Archiving and Communication System (image storage SCP, and image query/retrieve SCP), Radiology Information System (modality worklist SCP).

Service Class User (SCU) – role of an *Application Entity* that uses a DICOM network service; typically, a client. Examples: imaging modality (image storage SCU, and modality worklist SCU), imaging workstation (image query/retrieve SCU)

Service/Object Pair (SOP) Class – the specification of the network or media transfer (service) of a particular type of data (object); the fundamental unit of DICOM interoperability specification.

Service/Object Pair (SOP) Instance – an information object; a specific occurrence of information exchanged in a *SOP Class*. Examples: a specific x-ray image.

Tag – a 32-bit identifier for a data element, represented as a pair of four digit hexadecimal numbers, the “group” and the “element”. If the “group” number is odd, the tag is for a private (manufacturer-specific) data element. Examples: (0010,0020) [Patient ID], (07FE,0010) [Pixel Data], (0019,0210) [private data element]

Transfer Syntax – the encoding used for exchange of DICOM information objects and messages. Examples: *JPEG* compressed (images), little endian explicit value representation.

Unique Identifier (UID) – a globally unique “dotted decimal” string that identifies a specific object or a class of objects; an ISO-8824 Object Identifier. Examples: Study Instance UID, SOP Class UID, SOP Instance UID.

Value Representation (VR) – the format type of an individual DICOM data element, such as text, an integer, a person’s name, or a code. DICOM information objects can be transmitted with either explicit identification of the type of each data element (Explicit VR), or without explicit identification (Implicit VR); with Implicit VR, the receiving application must use a DICOM data dictionary to look up the format of each data element.

2. NETWORK CONFORMANCE STATEMENT

2.1 INTRODUCTION

This section of the DICOM Conformance Statement specifies the Invenia ABUS Viewer compliance to DICOM requirements for **Networking** features.

2.2 IMPLEMENTATION MODEL

The Invenia ABUS Viewer is a Networked Medical Imaging viewer application dedicated to Review of ABUS images. The viewer uses DICOM services to import ABUS images

and DICOM content related to the study performed by the Invenia ABUS Scan Station for possible further analysis or processing and to export to other DICOM implementations.

2.2.1 Application Data Flow Diagram

The network application model for the Invenia ABUS Viewer is shown in the following Drawing:

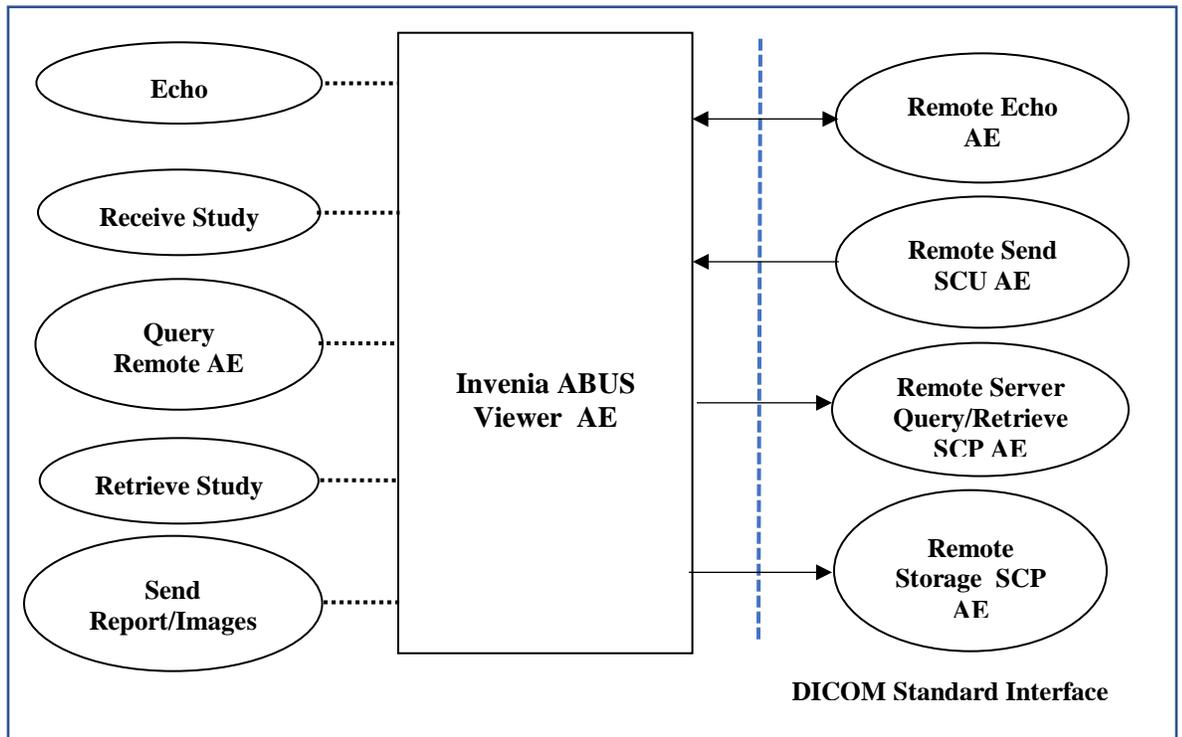

Figure 2–1 Invenia ABUS Viewer Network Application Model and Data Flow Diagram

The Invenia ABUS Viewer Application Entity (AE) is an application that handles DICOM protocol communication. The Invenia ABUS Viewer AE is automatically brought up when the Invenia Invenia ABUS Viewer SW is initialized.

The Invenia ABUS Viewer AE is invoked by the following Real World Activities:

- **Echo**

The Invenia ABUS Viewer AE automatically sends a verification request to a Remote (Echo) AE upon configuration and periodically every 30 seconds thereafter. The success or failure result is indicated on the GUI icon next to the remote destination selection and the configuration entry.

- **Receive Study**

A Remote Send SCU AE sends images to the Invenia ABUS Viewer AE. Received images are installed in the local image database.

Received images are processed for Review. The initial study status is set to NEW. Images received will be installed in the local database. Received images from the Invenia Scan Station are processed prior to Review. Received images may be deleted at anytime.

- **Query Remote**

The user manually initiates remote study queries from the Study Browser with a Remote Query/Retrieve SCP AE to obtain a list of data for a study at the Study/Series level.

- **Retrieve Study**

Once the remote list of data at the study level is displayed (Query Remote) in the Study Browser for a Remote Query/Retrieve SCP AE , the user can retrieve the SOP Classes supported by the Invenia ABUS Viewer.

- **Send Report/Images**

From the Study Browser, a user may manually initiate the Export of a DICOM Study in the Local Database.

From the Data Plane, a user may manually initiate a data export of selected screen captures and PDF reports as a DICOM C-STORE via the Invenia ABUS Viewer AE to a Remote Storage SCP AE.

The Invenia ABUS Viewer AE may be configured to automatically Send a Signed report with or without associated images to a Remote Storage AE.

2.2.2 Functional Definition of AE's

The Invenia ABUS Viewer has a single AE that performs all the required DICOM related tasks.

The Invenia ABUS Viewer AE responds to storage request and verification request.

The Invenia ABUS Viewer AE initiates a DICOM Association to send images.

The Invenia ABUS Viewer AE initiates a DICOM Association to perform query and receives patient and study information.

The AE initiates a DICOM Association to retrieve images.

The AE Initiates a DICOM Association to verify connection.

2.2.3 Sequencing of Real-World Activities

All SCP activities are performed asynchronously in the background and not dependent on any sequencing. All SCU activities are sequentially initiated in the user interface but run asynchronously.

2.3 AE SPECIFICATIONS

2.3.1 Invenia ABUS Viewer AE Specification

The Invenia ABUS Viewer Application Entity provides Standard Conformance to the following DICOM SOP Classes as an **SCU** and/or as an **SCP**:

SOP Class Name	SOP Class UID	SCU	SCP
Verification SOP Class	1.2.840.10008.1.1	Yes	Yes
Digital Mammography Image Storage - For Presentation	1.2.840.10008.5.1.4.1.1.1.2	No	Yes
MR Image Storage	1.2.840.10008.5.1.4.1.1.4	No	Yes
Enhanced MR Image Storage	1.2.840.10008.5.1.4.1.1.4.1	No	Yes
Ultrasound Multi-frame Image Storage	1.2.840.10008.5.1.4.1.1.3.1	Yes	Yes
Ultrasound Image Storage	1.2.840.10008.5.1.4.1.1.6.1	No	Yes
Study Root Query/Retrieve Information Model - FIND	1.2.840.10008.5.1.4.1.2.2.1	Yes	No
Study Root Query/Retrieve Information Model – MOVE	1.2.840.10008.5.1.4.1.2.2.2	Yes	No
Secondary Capture image storage	1.2.840.10008.5.1.4.1.1.7	Yes	Yes
Grayscale Softcopy Presentation State Storage	1.2.840.10008.5.1.4.1.1.11.1	Yes	Yes
Basic Text SR	1.2.840.10008.5.1.4.1.1.88.11	Yes	Yes
Encapsulated PDF Storage	1.2.840.10008.5.1.4.1.1.104.1	Yes	Yes

2.3.1.1 Association Establishment Policies

2.3.1.1.1 General

The DICOM Application Context Name (ACN), which is always proposed, is:

Application Context Name	1.2.840.10008.3.1.1.1
---------------------------------	------------------------------

The maximum length PDU receive size for the Invenia ABUS Viewer is:

Maximum Length PDU	28672 Bytes Not Configurable
---------------------------	---

2.3.1.1.2 Number of Associations

The Invenia ABUS Viewer AE accepts multiple associations at a time. The maximum number is 10. If the number is reached, a newly required association will be rejected until some associations are released. This transient rejection response might be delayed to avoid immediate retries.

The Storage SCU initiates a new association for each request, but there is only one open association at a time. The Query/Retrieve SCU initiates a new association for request.

2.3.1.1.3 Asynchronous Nature

Asynchronous mode is not supported. All operations will be performed synchronously.

2.3.1.1.4 Implementation Identifying Information

The Implementation UID for this DICOM Implementation is:

Implementation UID	2.16.840.1.114241.1
Implementation Version Name	Invenia ABUS 201

2.3.1.2 Association Initiation Policy

The AE will attempt to establish a new association with a remote device due to four real world activities:

- **Send Report/Images** initiates by the user for storing images and encapsulated pdf,
- **Query Remote AE** initiates by the user for receiving patient and study information,
- **Retrieve Study** initiates by the user for retrieving images, and
- **Echo** verifies the communication between peer DICOM AEs.

Each time one of these activities is initiated an identical sequence of actions will occur as described in the sections below.

When the Invenia ABUS Viewer Application Entity initiates an Association for any Real-World Activity, it will propose the Presentation Contexts for all Real-World Activities; i.e., there is only a single, comprehensive Presentation Context Negotiation proposed for the AE.

The Invenia ABUS Viewer proposes only a single Transfer Syntax in each Presentation Context; i.e., for each Abstract Syntax in the following Presentation Context Tables, the AE proposes one Presentation Context for each specified Transfer Syntax.

2.3.1.2.1 Real-World Activity: Send Report/Images

2.3.1.2.1.1 Associated Real-World Activity

From the Study Browser, a user may manually initiate the Export of a DICOM Study from the Local Database to a Remote Storage SCP AE.

From the Data Plane, a user may manually initiate a data export of selected screen captures and PDF reports as a DICOM C-STORE via the Invenia ABUS Viewer AE to a Remote Storage SCP AE.

From the Data Plane, the export status may be reviewed and, if desired, retry a transfer may be initiated.

The Invenia ABUS Viewer AE may be configured to automatically Send a Signed Report with or without the associated images to a Remote Storage AE.

Upon the send request, the Invenia ABUS Viewer will initiate an association, send one or several SOP Instances on that association to the destination.

There is only one open association at a time. All export requests are kept in a queue for sequentially transfer.

2.3.1.2.1.2 Proposed Presentation Context Table

Presentation Context Table – Proposed by AE Invenia ABUS Viewer for Activity Send Report/Images

2.3.1.2.1.2.1 SOP Specific DICOM Conformance Statement for All Storage SOP Classes

The Invenia ABUS Viewer includes optional data elements in the SOP Instances as described in Sections

- 4.0 Secondary Capture Information Object Implementation
- 5.0 Structured Report Information Object Implementation
- 6.0 Encapsulated PDF Implementation
- 7.0 US MULTI-FRAME Information Object Implementation

Following are the status codes that are more specifically processed when receiving messages from a Storage SCP system:

STATUS CODES RECEIVED BY SCAN STATION AE FOR ACTIVITY SEND Report/Images

Service Status	Status Code	Further Meaning	Status Code Explanation	Related Fields Sent Back to the SCU
Failure	A700–A7FF	Refused: Out of Resources		(0000,0902)

	A900–A9FF	Error: Data Set does not match SOP Class	The image transfer has failed. Association is closed and the DICOM send status indicator is set to red (transfer error). Any error information is logged.	(0000,0901) (0000,0902)
	C000–CFFF	Error: Cannot understand		(0000,0901) (0000,0902)
Warning	B000	Coercion of Data Elements	The image transfer has completed. The association is closed and the DICOM send status indicator is set to green (no errors).	(0000,0901) (0000,0902)
	B007	Data Set does not match SOP Class		(0000,0901) (0000,0902)
	B006	Elements Discarded		(0000,0901) (0000,0902)
Success	0000	Success	The image transfer has completed. The association is closed and the DICOM send status indicator is set to green (no errors).	None

2.3.1.2.1.2.2 SOP Specific DICOM Conformance Statement for the Ultrasound Multi-frame Image Storage SOP Class

See Section 2.3.1.2.2.1 “SOP Specific DICOM Conformance Statement for All Storage SOP Classes” for details on general Storage Service SCU processing also applicable to the Ultrasound Multi-frame Image Storage SOP Classes.

The Invenia ABUS Viewer receiving Ultrasound Multiframe Image Storage SOP Class objects, originating from an ABUS Scan Station with the 3 Image Types:

- ORIGINAL/PRIMARY/BREAST/0400
- ORIGINAL/PRIMARY/BREAST/0000/FLAT_TRANSVERSE
- ORIGINAL/PRIMARY/BREAST/0000/CURVED_PLANE

The value 4, “0000” indicates the GE proprietary encoding schemes.

When the Image Type (0008,0008) is encoded as:

- “/ORIGINAL/PRIMARY/BREAST/0000/Flat Transverse”,

the Private Group, General Electric Company 01 is added if it previously did not exist. The SERIES/STUDY/Instance unique identifiers are not updated with this addition to the SOP Instance.

The Invenia ABUS Viewer receiving Ultrasound Multiframe Image Storage SOP Class objects, originating from an ABUS Scan Station, are updated without change to the unique identifiers assigned by the ABUS Scan Station with one exception:

- The Frame of Reference UID (0020,0052) is updated.

The Invenia ABUS Viewer sending the Ultrasound Multiframe Image Storage SOP Class objects, originating from an ABUS Scan Station, will send only the images with the Image Type:

- ORIGINAL/PRIMARY/BREAST/0000/FLAT_TRANSVERSE

The Invenia ABUS Viewer will not send US-MF images with the Image Types which include:

- ORIGINAL/PRIMARY/BREAST/0400
- ORIGINAL/PRIMARY/BREAST/0000/CURVED_PLANE

2.3.1.2.1.2.3 SOP Specific DICOM Conformance Statement for the Basic Text Structured Reporting, Storage SOP Classes

The Basic Text SR object containing the Invenia ABUS (SR) Structured Report is created when a study is imported to the local system.

When the SR is updated, the SOP Instance UID is not updated.

For ABUS images in the imported study with a Nipple Marker position specified (Private Group General Electric Company 01), the Nipple Marker is added in an update to the ABUS SR report findings.

When Markers are manually added to the study, including the marker characteristics, the markers and their characteristics are added in an update to the report findings.

When measurements are manually added in the Caliper Mode, to the study. The measurements are added in an update to the report finding.

When a worksheet is saved by the suspend action, the Invenia ABUS SR is updated with entries by the user.

When the worksheet is saved by the sign action, the Invenia ABUS SR is updated with entries by the user.

2.3.1.2.1.2.4 SOP Specific DICOM Conformance Statement for Encapsulated PDF Implementation

See Section 2.3.1.2.2.1 “SOP Specific DICOM Conformance Statement for All Storage SOP Classes” for details on general Storage Service SCU processing also applicable to the Ultrasound Multi-frame Image Storage SOP Classes.

When the worksheet is saved by the sign action, the worksheet is saved as a PDF.

2.3.1.2.1.2.5 SOP Specific Conformance for the Secondary Capture Information Object Implementation

See Section 2.3.1.2.2.1 “SOP Specific DICOM Conformance Statement for All Storage SOP Classes” for details on general Storage Service SCU processing also applicable to the Ultrasound Multi-frame Image Storage SOP Classes.

When Markers are manually added to an image, a secondary capture is created showing the image view with the marker.

When measurements are manually added in the Caliper Mode, to an image, a secondary capture is created showing the image view of the caliper measurements.

When the viewer display is screen captured by the user, the image is saved as a secondary capture.

2.3.1.2.2 Real-World Activity: Query Remote AE

2.3.1.2.2.1 Associated Real-World Activity

The user queries a Remote database from the Study Browser by selecting a Remote Server from the pull down list of configured servers.

Remote Servers are configured in the DICOM configuration page as Q/R SCP Application Entities.

Selecting a Remote Server, will initiate the “Query” operation. The “Query” operation will cause the Invenia ABUS Viewer AE to initiate an association to the selected Remote Server AE.

The user may refine the ‘Query’ by entering specific search parameter criteria in the Study Browser and select “Search”

2.3.1.2.2.2 Proposed Presentation Context Table

The Find SCU provides Standard Conformance to the following SOP Classes:

Presentation Context Table – Proposed by AE Invenia ABUS Viewer for Activity Query Remote AE					
Abstract Syntax		Transfer Syntax		Role	Extended Negotiation
Name	UID	Name List	UID List		
Study Root Query/Retrieve Information Model – FIND	1.2.840.10008.5.1.4.1.2.2.1	Implicit VR Little Endian	1.2.840.10008.1.2	SCU	None

		Explicit VR Big Endian	1.2.840.10008.1.2.2		

2.3.1.2.2.3 SOP Specific Conformance to Find SCU

Only a single information model, Study Root, is supported.

All queries are initiated at the highest level of the information model (the STUDY level), and then for each response received, recursively repeated at the next lower levels (the SERIES and then IMAGE levels) if configured. No CANCEL requests are ever issued.

Unexpected attributes returned in a C-FIND response (those not requested) are ignored. Requested return attributes not returned by the SCP are listed as blank values. Non-matching responses returned by the SCP due to unsupported matching keys are not filtered locally by the FIND-SCU and thus will still be presented in the browser. No attempt is made to filter out duplicate responses.

Specific Character Set will always be included at every query level.

Service Status	Status Code	Further Meaning	Application Behavior When Receiving Status Code
Failure	A700	Out of Resources	The query has failed. Association is closed. Any error information is logged.
	A800	SOP Class not supported	

	A900	Data Set does not match SOP Class	
	C000	Unable to Process	
Success	0000	Matching is complete - No final identifier is supplied	
Pending	FF00	Suboperations are continuing	The query is continuing.

2.3.1.2.3 Real-World Activity: Retrieve Study

2.3.1.2.3.1 Associated Real-World Activity

Once a list of Study Information has been queried and displayed, the operator can invoke the “Retrieve” operation by choosing the study(s) in the browser to retrieve and selecting the “Retrieve” button from the display.

Upon the retrieve request, the Invenia ABUS Viewer opens a new, dedicated association, issues a C-Move request with the query parameters. After the C-Move request has been completed, the association is closed. The retrieved images are imported locally. If the Study included an Invenia ABUS SR, then this will be used to determine the Study Status. If an Invenia SR does not exist, the Invenia ABUS Viewer will create an Invenia ABUS SR report locally as New. If the retrieved images include Nipple Position, the new study will include the Nipple Position of each image in the newly created report.

2.3.1.2.3.2 Proposed Presentation Context Table

The Move SCU provides Standard Conformance to the following SOP Classes:

Presentation Context Table – Proposed by AE Invenia ABUS Viewer for Activity Retrieve Study					
Abstract Syntax		Transfer Syntax		Role	Extended Negotiation
Name	UID	Name List	UID List		
Study Root Query/Retrieve – MOVE	1.2.840.10008.5.1.4.1.2.2.2	Implicit VR Little Endian	1.2.840.10008.1.2.1	SCU	None
		Explicit VR Little Endian	1.2.840.10008.1.2.2		
		Explicit VR Big Endian	1.2.840.10008.1.2		

2.3.1.2.3.2.1 SOP Specific Conformance to Move SCU

Only a single information model, Study Root, is supported.

A retrieval will be performed at the STUDY level. No CANCEL requests are ever issued.

The instances are retrieved to the current application’s local database by specifying the destination as the AE Title of the Invenia ABUS Viewer . This implies that the remote C-MOVE SCP must be preconfigured to determine the presentation address corresponding to the Invenia ABUS Viewer.

C-Move SCU Status

Service Status	Meaning	Protocol Code	Behavior
Success	Retrieve has completed – No failures or Warnings.	0000	Association is closed. The retrieve results (images) are displayed.
Pending	Sub-operations are continuing	FF00	The retrieve are continuing.
Failure	Out of Resources	A701, A702	The retrieve has failed. Association is closed. Any error information is logged.

	Unable to Process	C000	

2.3.1.2.4 Real-World Activity: Echo Request

2.3.1.2.4.1 Associated Real-World Activity

Upon the search request, the Invenia ABUS Viewer opens a new dedicated association, issues a C-Find request with the query parameters. “Pending Responses” are propagated back to the initiator. After the C-Find request has been completed, the association is closed.

2.3.1.2.4.2 Proposed Presentation Context Table

2.3.1.2.4.3 SOP Specific Conformance to Echo SCU

The behavior of the Invenia ABUS Viewer AE when it receives status codes in a Verification C-ECHO response is summarized in below table. If any SCP response status other than “Success” is received by the system, a message shows Echo failed.

Verification C-ECHO Response Status Handling Behavior

Service Status	Further Meaning	Error Code	Behavior
Success	Success	0000	The association is closed.

The behavior of the Invenia ABUS Viewer AE during communication failure is summarized in the below Table.

Verification Communications Failure Behavior

Error condition	Behavior
Timeout expires for an expected DICOM PDU or TCP/IP packet.	A message shows Echo failed. Any error information is logged.

Error condition	Behavior
Association A-REJECTEd by the SCP.	
Association A-ABORTed by the SCP.	
Network layer indicates communication loss (i.e., low-level TCP/IP socket closure).	

2.3.1.2.5 Real-World Activity: Receive Image

2.3.1.2.5.1 Associated Real-World Activity

The Invenia ABUS Viewer may receive a C-STORE request by any C-STORE SCU.

Upon the C-STORE request, the Invenia ABUS Viewer opens a new, dedicated association. After the C-STORE request has been completed, the association is closed. The received images are stored locally. If the Study included an Invenia ABUS SR, then this will be used to determine the Study Status. If an Invenia SR does not exist, the Invenia ABUS Viewer will create an Invenia ABUS SR report locally as New. If the retrieved images include Nipple Position, the new study will include the Nipple Position of each image in the newly created report.

2.3.1.2.5.2 Accepted Presentation Context Table

2.3.1.2.6.2 SOP Specific Conformance to Echo SCP

The AE provides standard conformance to the Verification Service Class as an SCP.

2.3.1.2.6.3 Presentation Context Acceptance Criterion

No criterion.

2.3.1.2.6.4 Transfer Syntax Selection Policies

Within each Presentation Context, the Invenia ABUS Viewer will accept the first proposed transfer syntax that it also supports for that Abstract Syntax.

Within each Presentation Context, the Invenia ABUS Viewer will select Transfer Syntaxes according to the following priority (highest priority first):

Explicit VR Little Endian

Explicit VR Big Endian

Implicit VR Little Endian

2.4 COMMUNICATION PROFILES

2.4.1 Supported Communication Stacks

The DICOM Upper Layer Protocol is supported using TCP/IP, as specified in DICOM PS3.8.

The TCP/IP stack is inherited from the Windows 64 Bit Operating System.

2.4.2 Physical Media Support

The Invenia ABUS Viewer supports a single network interface. One of the following physical network interfaces will be available:

Supported Physical Network Interface

Ethernet 1000baseT
Ethernet 100baseT
Ethernet 10baseT

The Invenia ABUS Viewer only supports IPv4 connections.

2.5 EXTENSIONS / SPECIALIZATIONS/ PRIVATIZATIONS

2.5.1 Standard Extended / Specialized / Private SOP Classes

Not applicable.

2.5.2 Private Transfer Syntaxes

Not applicable.

2.6 CONFIGURATION

2.6.1 AE Title/Presentation Address Mapping

The AE Title must be unique. On the Invenia ABUS Viewer the AE Title to Presentation Address mapping is done by mapping the AE Title to the IP address configured in the Application Entity screen that is accessible to the user.

2.6.2 Configurable Parameters

The following fields are configurable for this AE (local):

- Local AE Title
- Local Listening Port Number

The following fields are configurable for every remote DICOM AE:

- Remote AE Title
- Remote IP Address
- Listening TCP/IP Port Number

Configuration Parameters

Parameter	User Configurable (Yes/No)	Service Configurable (Yes/No)	Default Value
Maximum PDU receive size	No	No	16kB
Maximum PDU send size	No	No	16kB (smaller sizes are negotiated per association)
Timeout for accepting/rejecting an association request	No	Yes	30s
Timeout for responding association open/close request	No	Yes	30s
Timeout for accepting message over network	No	No	120s
Timeout for waiting for data between TCP/IP packets	No	No	120s
Timeout for requesting an association	No	Yes	30s
Timeout for waiting for sending message to a remote node (Storage SCU)	No	No	Unlimited
Timeout for waiting for a service response message from a remote node (Query/Retrieve SCU)	No	No	Unlimited
Timeout waiting for a response to a N-CREATE-RQ, N-SET-RQ or N-ACTION-RQ	No	No	20s

2.7 SUPPORT OF CHARACTER SETS

The ABUS work station support character set for ISO_IR 100 and ISO_IR 192.

2.8 CODES AND CONTROLLED TERMINOLOGY

2.9 SECURITY PROFILES

The product does not conform to any defined DICOM Security Profiles.

It is assumed that the product is used within a secured environment. It is assumed that a secured environment includes at a minimum:

- Firewall or router protections to ensure that only approved external hosts have network access to the product.
- Firewall or router protections to ensure that the product only has network access to approved external hosts and services.
- Any communications with external hosts and services outside the locally secured environment use appropriate secure network channels (such as a Virtual Private Network (VPN))

3. QUERY IMPLEMENTATION

3.1 INVENIA ABUS VIEWER MAPPING OF DICOM ENTITIES

3.2 INFORMATION MODEL KEYS

Please refer to DICOM Standard PS 3.4 (Service Class Specifications) for a description of each of the levels contained within the Query/Retrieve Information Model.

3.2.1 Common Query Keys

Upon the search request, the Invenia ABUS Viewer opens a new dedicated association, issues a C-Find request with the query parameters. “Pending Responses” are propagated back to the initiator. After the C-Find request has been completed, the association is closed.

5.4 INFORMATION MODULE DEFINITIONS

Please refer to DICOM Part 3 (Information Object Definitions) for a description of each of the entities, modules, and attributes contained within the SR Information Objects.

The following modules are included to convey Enumerated Values, Defined Terms, and Optional Attributes supported and expected. Type 1 & Type 2 Attributes are also included for completeness and to define what values they may take and where these values are obtained from when generating the instance as well as what are the expected values when loading such instance. It should be noted that they are the same ones as defined in the DICOM Standard Part 3 (Information Object Definitions). Also note that Attributes not present in tables are not supported.

5.4.2.2 SR Document Content Module

This Section specifies the attributes that identify and describe the SR content.

NOTE : Coding Scheme, 99_OFFIS_DCMK, used by this application is from open source sample code. The coding scheme is private and defined by GE and not the authors of the sample code as implied by this Conformity Document.

6. ENCAPSULATED PDF IMPLEMENTATION

6.1 INTRODUCTION

This section specifies the use of the DICOM Encapsulated PDF IOD to represent the information included in Encapsulated PDF produced by this implementation. Corresponding attributes are conveyed using the module construct.

6.2 INVENIA ABUS VIEWER MAPPING OF DICOM ENTITIES

The Invenia ABUS Viewer maps DICOM Information Entities to local Information Entities in the product's database and user interface.

7. US MULTI-FRAME INFORMATION OBJECT IMPLEMENTATION

7.1 INTRODUCTION

This section specifies the use of the DICOM US Image IOD to represent the information included in US Images produced by Invenia ABUS Scan Station, updated by the Invenia ABUS Viewer implementation. Corresponding attributes are conveyed using the module construct.

7.2 INVENIA ABUS SCAN STATION MAPPING OF DICOM ENTITIES

The Invenia ABUS Viewer maps DICOM Information Entities to local Information Entities in the product’s database and user interface.

7.4.3.1.1 Series Description

Series Description is configurable to append the content of view Name(0008,2127) as the value.

The content is appended with "Coronal view series" when image type(0008,0008) value 5 is "Curved_Plane,

The content is appended with "Curved Transverse View Series" when image type(0008,0008) value 4 is "0400".

7.4.4 Frame Of Reference Entity Modules

7.4.4.1 Frame Of Reference Module

Images sharing the same Frame of Reference UID are created using common scanned acquisition data and are spatially related.

7.4.4.1.1 Frame Of Reference UID

The Frame of Reference UID may be used to spatially relate images with common scanned acquisition data. Common Images utilizing the same Frame of Reference UID, have the a common View Name (0008,2127). Image type(0008,0008) may specify images which include pixel data in a proprietary coordinate system. The relationship between images with the proprietary coordinate system is not specified in this document. Images with the standard Cartesian Coordinate System and be spatially related based standard DICOM attributes.

7.4.6.1.1 Patient Orientation

Patient Orientation has a VR of 2. Values may include the capital letters:

- A (anterior)

- P (posterior)
- L(left)
- R (right)

7.4.6.1.2 Image Type

For Value 1, only “ORIGINAL” is supported.

For Value 2, only “PRIMARY” is supported.

For value 3, only “BREAST” is supported.

For Value 4, the bit maps supported are,

- 0000 – GE Proprietary Spatial Coordinate Systems
- 0400 – Spatially Related Frames

Value 5 is a modifier for when value 4=0000 (GE Proprietary Spatial Coordinate System)

- FLAT_TRANSVERSE
- CURVED_PLANE

The GE proprietary spatial coordinate system is not defined in the DICOM standard. Images are intended for processing/display by compatible devices, such as the Invenia ABUS Viewer.

7.4.6.1.3 Derivation Description

When Lossless JPEG compression is applied to the Pixel Data, the system automatically populates this field with the compression type, selection value, point transform, and resulting compression ratio. The image type is “ORIGINAL” and not “DERIVED”. The automatic generation of this content is retained. Otherwise, this attribute is not used when the image type is “ORIGINAL”.

7.4.6.1.4 Derivation Code Sequence

When Lossless JPEG compression is applied to the Pixel Data, the system automatically populates this sequence with

- Code Value: 121327
- Coding Scheme Designator: DCM
- Code Meaning: Full Fidelity Image

The image type is “ORIGINAL” and not “DERIVED”. The automatic generation of this content is retained. Otherwise, this attribute is not used when the image type is “ORIGINAL”.

7.5.1.1.1 Derivation Description

When Lossless JPEG compression is applied to the Pixel Data, the system automatically populates this field with the compression type, selection value, point transform, and resulting compression ratio. The image type is “ORIGINAL” and not “DERIVED”. The automatic generation of this content is retained. Otherwise, this attribute is not used when the image type is “ORIGINAL”.

7.5.1.1.2 Derivation Code Sequence

When Lossless JPEG compression is applied to the Pixel Data, the system automatically populates this sequence with

- Code Value: 121327
- Coding Scheme Designator: DCM
- Code Meaning: Full Fidelity Image

The image type is “ORIGINAL” and not “DERIVED”. The automatic generation of this content is retained. Otherwise, this attribute is not used when the image type is “ORIGINAL”.

7.5.2 Private Group: General Electric Company

Private Group, “General Electric Company” is modeled as part of the Image Information Entity.

7.5.4.1.1 Frame Of Reference UID

The Frame of Reference UID may be used to spatially relate images with common scanned acquisition data. Common Images utilizing the same Frame of Reference UID, have the a common View Name (0008,2127). Image type(0008,0008) may specify images which include pixel data in a proprietary coordinate system. The relationship between images with the proprietary coordinate system is not specified in this document. Images with the standard Cartesian Coordinate System and be spatially related based standard DICOM attributes.
