

Supporting you during the COVID-19 crisis

FREE COLLABORATION WITH TRICEFY™ THROUGH THE TRICEFY UPLINK APP ON VSCAN EXTEND™*

Tricefy Uplink on Vscan Extend is a perfect fit in this unprecedented emergency situation, mitigating the risk of exposure and ensuring the safety and wellbeing of both caregivers and patients is imperative. To help you provide a safe environment, we're offering Tricefy's collaboration platform free of charge on Vscan Extend during this COVID-19 crisis. Tricefy and Vscan Extend are a perfect fit for your facility, especially for assessing lung and cardiac function on seriously ill patients. Vscan Extend is an easy-to-clean ultrasound device, and Tricefy supports safe medical imaging collaboration between a sterile ICU and a remote consultant. Tricefy is an integrated, cloud-based solution that allows you to share examination images, clips and reports with colleagues for seamless collaboration. Activation is simple and supported remotely.

REMOTE ACCESS

Healthcare workers are one of the groups most at risk of exposure to the virus. If you are challenged with medical staff shortages as your colleagues are infected or quarantined, they still can help by reviewing the ultrasound examinations from home. Tricefy supports remote reviewing **from anywhere at anytime** immediately after you upload the exam from your Vscan Extend.

Helping provide quality care for every patient.

REMOTE CONSULTATION

You have a concern on your patient's ultrasound exam and want to get a second opinion — but you don't want to risk the potential for exposure. Tricefy supports safe and seamless collaboration between a sterile environment and a remote consultant to minimize unnecessary exposure to additional patients and staff. With Tricefy, you can **easily** and **securely** share images and reports with colleagues to review and advise if referral is required.

Enabling the continuum of care while maintaining a sterile, safe environment.

REMOTE COLLABORATION

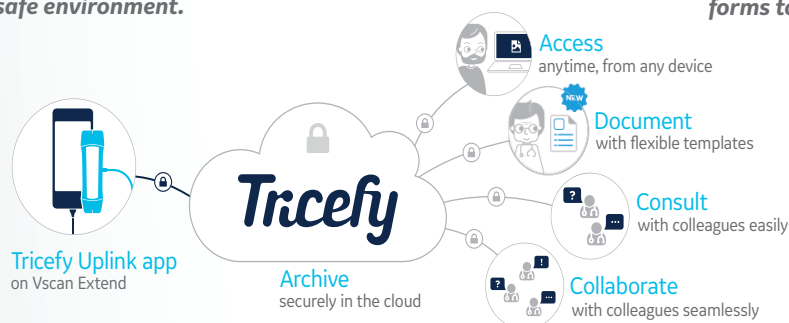

You need to collaborate with one or more specialists to determine the best care plan for your patient. Potential exposure for your patient, as well as you and your colleagues, needs to be minimized as much as possible. Tricefy enables you to **wirelessly** share images from sterile working environments via the cloud for **seamless** collaboration across colleagues and locations.

Expanding collaboration and managing risk.

REMOTE DOCUMENTATION

You need to create a report for an ultrasound exam. Perhaps you need to send it to a specialist for consultation, or perhaps you just need to prepare it for coding and reimbursement purposes. Experience Adaptive Reporting with Tricefy. Get started quickly with one of Tricefy's standard templates or adapt it to meet your needs using intuitive design tools, including auto-completion of information right from your imaging device.

Build your own templates from scratch, from simple intake forms to complex procedure reports.

Tricefy* is an integrated cloud-based solution that allows you to easily share images and reports with colleagues as well as to securely archive them.

To support healthcare providers globally during the COVID-19 crisis, Trice Imaging is offering the following COVID-19 package free of charge for at least 90 days.**

- Remote access to all clinical tools
- Remote consultation and collaboration features with full audit trail
- Secure, compliant storage of imaging studies for 12 months
- Automated routing of imaging studies between facilities
- 100% remote installation and support included

Simply download and install Tricefy Uplink from the GE Marketplace onto your Vscan Extend to start your connection with Tricefy.
