The digital technology revolution in healthcare has changed forever the way that hospitals connect and communicate. Device and network connectivity is essential to administering healthcare in the modern era. Clinicians are facing challenges on all fronts and rising patient acuity requires patient monitoring and therapy devices that connect and capture data with zero compromise to patient care.

When integrating medical devices, vital patient data that is electronically transmitted to the EMR or other third-party application helps save time, reduce charting errors, and allows clinicians more time to spend with their patients.

**GE Healthcare and Capsule work together to help ensure connectivity.** Medical device connectivity is available using Capsule Medical Device Information System. This solution integrates with your work processes and delivers connectivity across the enterprise in a way that leverages your existing technologies, both inside and outside the GE offering.

GE Healthcare devices currently supported for perioperative care include:

- Aespire
- Aespire View
- Aestiva
- Aisys* Carestation*
- Aisys CS2
- Anesthesia Monitor
- Avance* Carestation
- Avance CS2
- Carestation 620
- Carestation 650
- Carestation 650c
- Aware Gateway
- B40 Monitor
- B105 Monitor
- B125 Monitor
- Cardiocap/5
- CARESCAPE* Gateway
- CARESCAPE Monitor B450
- CARESCAPE Monitor B650
- CARESCAPE Monitor B850
- Compact Anesthesia Monitor
- Dash 3000
- Dash 4000
- Dash 5000
- FM Monitor
- Solar* 8000i

Capsule connects with many information systems typically found in the perioperative care environment:

- Amkai
- Dräger
- Epic
- GE Healthcare
- iMDsoft
- iProcedures
- McKesson
- MEDHOST
- Philips
- Picis
- SIS
- SourceMedical
### Capsule cables, DIM and patch cable requirements
