GE Healthcare does not take responsibility for any damages resulting from changes on drawings made by others. Errors may occur by not referring to the complete set of final issue drawings. GE cannot accept responsibility for any damage due to the partial use of GE final issue drawings, however caused. All dimensions are in millimeters unless otherwise specified. Do not scale from printed pdf files. GE accepts no responsibility or liability for defective work due to scaling from these drawings.

A mandatory component of this drawing set is the GE Healthcare Pre Installation manual. Failure to reference the Pre Installation manual will result in incomplete documentation required for site design and preparation.

Pre Installation documents for GE Healthcare products can be accessed on the web at: www.gehealthcare.com/siteplanning

GE Healthcare

NM 830 & DISCOVERY NM 630
FINAL STUDY

Drawn by  Verified by  Concession  S.O. (GON)  PIM Manual  Rev
PMM RET - ---- 5491539-1EN 6

Format  Scale  File Name  Date  Sheet
A3  1/4"=1'-0"  EN-NUC-TYP-DISCOVERY_NM_630-830-WEB.DWG  04/Oct/2019  01/13
DISCLAIMER

GENERAL SPECIFICATIONS

- GE is not responsible for the installation of developers and associated equipment, lighting, cassette trays and protective screens or derivatives not mentioned in the order.
- The final study contains recommendations for the location of GE equipment and associated devices, electrical wiring and room arrangements. When preparing the study, every effort has been made to consider every aspect of the actual equipment expected to be installed.
- The layout of the equipment offered by GE, the dimensions given for the premises, the details provided for the pre-installation work and electrical power supply are given according to the information noted during on-site study and the wishes expressed by the customer.
- The room dimensions used to create the equipment layout may originate from a previous layout and may not be accurate as they may not have been verified on site. GE cannot take any responsibility for errors due to lack of information.
- Dimensions apply to finished surfaces of the room.
- Actual configuration may differ from options presented in some typical views or tables.
- If this set of final drawings has been approved by the customer, any subsequent modification of the site must be subject to further investigation by GE about the feasibility of installing the equipment. Any reservations must be noted.
- The room layout indicates the placement and interconnection of the indicated equipment components. There may be local requirements that could impact the placement of these components. It remains the customer’s responsibility to ensure that the site and final equipment placement complies with all applicable local requirements.
- All work required to install GE equipment must be carried out in compliance with the building regulations and the safety standards of local government in the country concerned.
- These drawings are not to be used for actual construction purposes. The company cannot take responsibility for any damage resulting therefrom.

CUSTOMER RESPONSIBILITIES

- It is the responsibility of the customer to prepare the site in accordance with the specifications stated in the final study. A detailed site readiness checklist is provided by GE. It is the responsibility of the customer to ensure all requirements are fulfilled and that the site conforms to all specifications defined in the checklist and final study. The GE Project Manager of Installation (PMI) will work in cooperation with the customer to follow up and ensure that actions in the checklist are complete, and if necessary, will aid in the rescheduling of the delivery and installation date.
- Prior to installation, a structural engineer of record must ensure that the floor and ceiling is designed in such a way that the loads of the installed system can be securely borne and transferred. The layout of additional structural elements, dimensioning and the selection of appropriate installation methods are the sole responsibility of the structural engineer. Execution of load bearing structures supporting equipment on the ceiling, floor or walls are the customer’s responsibility.

RADIO-PROTECTION

- Suitable radiological protection must be determined by a qualified radiological physicist in conformance with local regulations. GE does not take responsibility for the specification or provision of radio-protection.

THE UNDERSIGNED, HEREBY CERTIFIES THAT I HAVE READ AND APPROVED THE PLANS IN THIS DOCUMENT.

Specific for PET and Nuclear Medicine

| Nuclear Medicine systems levelness measurement survey must be provided to GE prior to the delivery. |
| Site has license for using/Importing radioactive sources and a Hot Lab is available. Radioactive Sources should be available for system calibration during installation. |
| Doors and windows complete or scheduled to be installed. If applicable, radiation protection (shielding) finished & radioprotection regulatory approval for installation obtained. |

FS Signature: optional |
CUSTOMER SITE READINESS REQUIREMENTS

- Any deviation from these drawings must be communicated in writing to and reviewed by your local GE healthcare installation project manager prior to making changes.
- Make arrangements for any rigging, special handling, or facility modifications that must be made to deliver the equipment to the installation site. If desired, your local GE healthcare installation project manager can supply a reference list of rigging contractors.
- New construction requires the following:
  1. Secure area for equipment,
  2. Power for drills and other test equipment,
  3. Capability for image analysis,
  4. Restrooms.
- Provide for refuse removal and disposal (e.g. crates, cartons, packing)
- It is the customer's responsibility to contract a vibration consultant/engineer to implement site design modifications to meet the GE vibration specification. Refer to the system preinstallation manual for the vibration specification.

ENVIRONMENT

MAGNETIC FIELD SPECIFICATIONS
In order to avoid interference on the system, the static field limits from the surrounding environment must be less than 1 Gauss in both the scan and the operator rooms.

VIBRATION SPECIFICATIONS
The system components are sensitive to vibration in the frequency range of 0.5 to 20 Hz, depending on the amplitude of the vibration. It is the customer’s responsibility to contract a vibration consultant or qualified engineer to verify that these specifications are met and implement an appropriate solution.

To minimize vibrations, the system must be installed on a solid floor, as far as possible from vibration sources (parking lots, roadways, heliports, elevators, hospital power plants… etc).

The maximum steady state vibration transmitted through the floor should not exceed 0.002 m/s² RMS maximum single frequency above ambient baseline from 0.5 to 80 Hz (measured per 1/3 octave band).

Please refer to the PIM for detailed information.

ACOUSTIC SPECIFICATIONS
It is less than 70 dBA measured at a distance of one meter from the nearest gantry surface, in any direction.

It is recommended that the wall and ceiling surface is of a sound dampening material so that the noise is not reverberated and amplified.

RADIOACTIVE ISOTOPES

USING RADIOACTIVE ISOTOPES

Since the Discovery NM 630 involves the use of radioactive isotopes, compliance with Nuclear Regulatory Commission regulations, or similar regulatory requirements (depending on the country), must be adhered to and all permissions obtained well in advance. It is recommended that regulatory compliance is arranged early in the site planning process.

It is essential that all preparations are completed so that required source materials can be obtained prior to installation, including calibration sources. Take into consideration that these sources may have fairly long delivery lead times, yet may also have a short half life, so that it may not be advisable to store them over long periods of time.

Finished floor to slab height TBD
Recommended finished ceiling height 8'-9"
The Customer/Contractor Should:

- Provide an area adjacent to the installation site for delivery and unloading of the GE equipment.
- Ensure that the dimensions of all doors, corridors, ceiling heights are sufficient to accommodate the movement of GE equipment from the delivery area into the definitive installation room.
- Ensure that access routes for equipment will accommodate the weights of the equipment and any transportation, lifting and rigging equipment.
- Ensure that all necessary arrangements for stopping and unloading on public or private property not belonging to the customer have been made.

STRUCTURAL NOTES

- All units that are wall mounted or wall supported are to be provided with supports where necessary. Wall supports are to be supplied and installed by the customer or his contractors. See plan and detail sheets for suggested locations and mounting hole locations.

- Floor slabs on which equipment is to be installed must be level to specifications. (If not specified elsewhere on this sheet, the floor levelness should be 1/8 in. [3 mm] in 10 ft. [3.05 m].)

- Dimensions are to finished surfaces of room.

- For seismic regions ensure supports span three members.

- Customers contractor must provide all penetrations in post tension floors.

- Customers contractor must provide and install any non-standard anchoring. Documents for standard anchoring methods are included with GE equipment drawings for geographic areas that require such documentation.

- Customers contractor must provide and install hardware for "through the floor" anchoring and/or any bracing under access floors. This contractor must also provide floor drilling that cannot be completed because of an obstruction encountered while drilling by the GE installer such as rebar etc.

- It is the customer's responsibility to perform any floor or wall penetrations that may be required. The customer is also responsible for ensuring that no subsurface utilities (e.g., electrical or any other form of wiring, conduits, piping, duct work or structural supports (i.e. post tension cables or rebar)) will interfere or come in contact with subsurface penetration operations (e.g., drilling and installation of anchors/screws) performed during the installation process. To ensure worker safety, GE installers will perform surface penetration operations only after the customer's validation and completion of the "GE surface penetration permit"

(EXE SUPPLIED / CONTRACTOR INSTALLED)
**ANCHORING TO THE FLOOR**

**MAIN ANCHORING POINT**

**ALTERNATIVE ANCHORING POINT**

**SCALE 1:25**

**LOADING DISTRIBUTION TO THE FLOOR**

**FLOOR SPECIFICATIONS**

- **Floor leveling area:** 512 cm \( (201.6 \text{ in}) \) x 374 cm \( (147.2 \text{ in}) \) (covering the entire planned area of table and gantry surface).
- **Slope less than 13 mm \( (0.5 \text{ in}) \) over 4300 mm \( (160 \text{ in}) \), if slope is between 13 mm \( (0.5 \text{ in}) \) and 30 mm \( (1.18 \text{ in}) \) refer to PIM for additional requirements.
- **Flatness:** the surface must be smooth, with deviations of no more than 5 mm \( (0.195 \text{ in}) \) between depressions and high spots in any 1500 mm \( (59 \text{ in}) \) throughout the room or system installation area.
- **Floor surface:** a single poured surface.
- **Floor strength:** in order to enable mounting of the system floor anchors, concrete floors must have a minimum cube strength of \( f'c=4350 \text{ psi} \) (30 MPa) at 28 days (curing time) for 25/30 concrete.
- **Floor thickness:** the system’s floor anchors are designed for use only on concrete floors that meet the minimal 140 mm \( (5.5 \text{ in}) \) concrete floor requirements.
- **The selected anchoring method must have a pulling tensile force of 19.7 kN on each of the anchors bolting the NM gantry to the floor.**

**NOT TO SCALE**

**SCALE 1:25**

**FLOOR ANCHORING**

- Gantry weight: 21.48 kN (with HEGP collimators mounted)
- Table weight: 3.53 kN

STORAGE CONDITIONS

- Temperature: +4°C [+40°F] to +27°C [+80°F]
- Relative Humidity (1): 20% to 60%
- Humidity gradient: ≤ 5%/h
- Air pressure: 700 hPa to 1060 hPa
- Storage longer than 12 months is not recommended.

(1) Relative humidity

AIR RENEWAL

According to local standards.

NOTE

In case of using air conditioning systems that have a risk of water leakage it is recommended not to install it above electric equipment or to take measures to protect the equipment from dropping water.

HEAT DISSIPATION

- Relative humidity
- Temperature gradient
- Altitude
- Humidity gradient
- Air pressure
- Storage longer than 12 months is not recommended.
ELECTRICAL NOTES

1. All wires specified shall be copper stranded, flexible, thermo-plastic, color coded, cut 10 foot long at outlet boxes, duct termination points or stubbed conduit ends. All conductors, power, signal and ground, must be run in a conduit or duct system. Electrical contractor shall ring out and tag all wires at both ends. Wire runs must be continuous copper stranded and free from splices.

   1.1. Aluminum or solid wires are not allowed.

   2. Wire sizes given are for use of equipment. Larger sizes may be required by local codes.

   3. It is recommended that all wires be color coded, as required in accordance with national and local electrical codes.

   4. Conduit sizes shall be verified by the architect, electrical engineer or contractor, in accordance with local or national codes.

   5. Conduit/junction boxes illustrated on this plan must be installed flush with finished ceiling.

   6. Conduit and duct runs shall have sweep radius bends with minimum radius in accordance with national and local electrical codes.

   7. All ductwork must meet the following requirements:

       1. Ductwork shall be metal with dividers and have removable, accessible covers.

       2. Ductwork shall be certified/rated for electrical power purposes.

       3. Conduit sizes shall be verified by the architect, electrical engineer or contractor, in accordance with local or national codes.

       4. PVC as a substitute must be used in accordance with all local and national codes.

       5. Convenience outlets are not illustrated. Their number and location are to be specified by others. Locate at least one convenience outlet close to the system control, the power distribution unit and one on each wall of the procedure room. Use hospital approved outlet or equivalent.

       6. General room illumination is not illustrated. Caution should be taken to avoid excessive heat from overhead spotlights. Damage can occur to ceiling mounting components and wiring if high wattage bulbs are used. Recommend low wattage bulbs no higher than 75 watts and use dimmer controls (except mr). Do not mount lights directly above areas where ceiling mounted accessories will be parked.

       7. Routing of cable ductwork, conduits, etc., must run direct as possible otherwise may result in the need for greater than standard cable lengths (refer to the interconnection diagram for maximum usable lengths point to point).

       8. Conduit turns to have large, sweeping bends with minimum radius in accordance with national and local electrical codes.

       9. A special grounding system is required in all procedure rooms by some national and local codes. It is recommended in areas where patients might be examined or treated under present, future, or emergency conditions. Consult the governing electrical code and confer with appropriate customer administrative personnel to determine the areas requiring this type of grounding system.

       10. The maximum point to point distances illustrated on this drawing must not be exceeded.

       11. Physical connection of primary power to GE equipment is to be made by customers electrical contractor with the supervision of a GE representative. The GE representative would be required to identify the physical connection location, and insure proper handling of GE equipment.

       12. GEHC conducts power audits to verify quality of power being delivered to the system. The customer’s electrical contractor is required to be available to support this activity.

       13. Site-to-Site VPN/GE Solution

       14. Site-to-Site VPN/Customer Solution

       15. Connection through Dedicated Service Network

       16. Internet Access - connectivity for InSite 2.0

The requirements for these connectivity solutions are explained in the broadband solutions catalogue (separate document).

NOT TO SCALE
POWER REQUIREMENTS

POWER SUPPLY: TWO-PHASE/ONE PHASE+ N 173-250 VAC ±10%

FREQUENCIES: 50/60 Hz ± 3 Hz

MAXIMUM POWER DEMAND: 6 kVA

CONTINUOUS (AVERAGE) POWER DEMAND: 3 kVA

- Line supply should come into a Main Disconnect Panel (MDP) containing the protective units and controls. The section of the supply cable should be calculated in accordance with its length and the maximum permissible voltage drops, equal to 2.9% max. of regulation for feeder size.
- There must be discrimination between supply cable protective material at the beginning of the installation (main low-voltage transformer side) and the protective devices in the MDP.

SUPPLY CHARACTERISTICS:
- Power input must be separate from any others which may generate transients (elevators, air conditioning, radiology rooms equipped with high speed film changers ...)
- All equipment (lighting, power outlets, etc...) installed with GE system components must be powered separately.
- Phase imbalance 2% maximum.
- Maximum voltage regulation at full load = 6% (including line impedance)

GROUND SYSTEM:
- Equipotential: The equipotential link will be by means of an equipotential bar. This equipotential bar should be connected to the protective earth conductors in the ducts of the non GE cableways and to additional equipotential connections linking up all the conducting units in the rooms where GE system units are located.

CABLES:
- Power and cable installation must comply with the distribution diagram below.
- All cables must be isolated and flexible, cable color codes must comply with standards for electrical installation.
- The cables from signaling and remote control (Y, SEO, L ...) will go to MDP with a pigtail length of 1.5 m, and will be connected during installation. Each conductor will be identified and isolated (screw connector).

CABLEWAYS:
The general rules for laying cableeways should meet the conditions laid down in current standards and regulations, with regard to:
- Protecting cables against water (cableways should be waterproof)
- Protecting cables against abnormal temperatures (proximity to heating pipes or ducts)
- Protecting cables against temperature shocks
- Replacing cables (cableways should be large enough for cables to be replaced)
- Metal cableways should be grounded

FEEDER TABLE

</tr>
</tbody>
</table>

GENERAL NOTES:
- In all cases qualified personnel must verify that the feeder (at the point of take-off) and the run to the GE system meet all the requirements stated in the PIM.
- For a single unit installation, the minimum transformer size is 8kVA, with 2.4% rated regulation at unity power factor. Maximum allowable total source regulation is 6%.
- A 8 AWG (6mm²) Grounding conductor will run from the equipment back to the power source/main grounding point and always travel in the same conduit with the feeders.

POWER DISTRIBUTION:

Main supply
1 phase
220/240 V

Ground cable (PE)
2-Black
1-White
1-Green

MDP Main Disconnect Panel
A2 UPS Disconnect
UPS UPS Cabinet

Notes:
(1) Cable with a usable length of 12m (39.37 ft) is delivered with the system.
