

# Continuity™ Standard

## Ongoing cybersecurity maintenance with Continuity™ Standard

Cybersecurity threats are ever-changing and require a vigilant response. We strive to provide fixes to prevent ransomware threats and other attacks before they become a real problem for our customers. We monitor threats as they arise, including vulnerabilities that may apply to our products. We rapidly communicate essential information to our customers, including how to remediate or mitigate emerging issues.

Built into your GE HealthCare service contract agreement, Continuity™ Standard provides added protection, ongoing operating system updates and cybersecurity patches to help ensure your devices stay current over lifetime.

The program supports operating system vitality by GE HealthCare validated patches, helping to mitigate evolving threats and vulnerabilities.

You'll further benefit from **regular system software updates** to the base system software to optimize the performance and reliability of the device. If you wish to upgrade your current base system software, further Continuity and Smart Subscription Programs are available.

## Continuity™ Standard advantages helping you to address:

### System Software Updates

Regular updates to base system software to optimize performance of the device

### Patient Data Protection

Continuous improvements for your patients' data safety

### Regulatory Compliance

Equipment embedded process to fulfill cybersecurity and data privacy requirements and reduce liability risks

### Documentation Needs

Transparent documentation on your equipment's cybersecurity and update status

## Cybersecurity

Care that's seamlessly connected and continuously protected  
Hospitals face a constant and evolving cyber threat landscape. The healthcare industry is spending more time, effort and money than ever to combat costly and potentially dangerous data breaches and cyber attacks.

GE HealthCare helps protect you and your patients through a holistic approach to security. We focus on more than implementing security controls in the devices we make. We continuously work together with our customers and colleagues – across our company, across the healthcare industry and across the cybersecurity field. Because today's hospital is increasingly interconnected, and threats continue to evolve.

### At a high level, we focus on two key security program components:

**1** Hardening the medical devices making sure that every device is secured against potential nefarious activity

**2** Maintaining security through the lifecycle of our products assessing and addressing new vulnerabilities as they come out

## Extend your Continuity™ Standard advantages with our additional offerings:

	CONTINUITY STANDARD	CONTINUITY ADVANCE	CONTINUITY PREMIUM
<b>OS updates</b> Continuous operating system corrections & cybersecurity patches	✓		
<b>System software updates</b> Proactive software updates to address bugs	✓		
<b>System software upgrades</b> Proactive base system software upgrade & existing option improvements		✓	✓
<b>Hardware upgrades</b> Hardware replacement to enable software upgrades			✓

\*The guaranteed delivery of Continuity Standard™ services over lifetime requires a valid minimum service contract with GE HealthCare to ensure consistent connectivity.
