Infusion System

IRadimed® MRidium 3860+ Infusion System

The better choice for MRI critical IV medication delivery. Traditional infusion pumps are not safe for use in the MRI scan room (Zone IV). MRI IV infusion workarounds can cause delays, hazards and infusion inaccuracies. Adding long IV extensions may reduce drug flow rate and increase the chance of a hospital acquired infection. Instead, use a non-magnetic¹ IV infusion pump to more safely infuse critical medications in the MRI room.

Reduce your patient's time away from their care unit

Connecting the patient to an MRI infusion pump in their originating department streamlines the MRI workflow. Using the MRidium® with critical IV medications allow pump transfers to happen in a familiar and controlled environment.

The MRidium Dual Channel system

The MRidium 3860+ MRI IV Infusion System meets the demanding clinical needs of today's patients, by allowing continuous delivery of medications and anesthetics throughout the MRI care cycle. The dual system allows the simultaneous delivery of 2 IV drugs from a syringe, bag, or bottle fluid source in the MRI room suite.

Its light weight design (11.5 lb/5.2 kg) makes it easy to transport critically ill patients from ICU to the MRI department.

MRidium IV Infusion Pump

The non-magnetic design allows the MRidium infusion pump to safely operate in the MRI room.

MRidium Wireless Remote Control

(optional) The Wireless Remote eliminates delays caused by stopping the MRI scan to titrate or bolus by providing clinicians full operation from the MRI control room. It utilizes the same user interface as the 3860+ infusion pump.

MR Safety

We offer two types of safety devices for MRI.

- Handheld metal detectors detect both ferrous and non-ferrous metallic items. These wands are highly user dependent in technique and have low sensitivity. A proper scan takes 1-2 minutes at close proximity to the patient (Cat# E8810BC)
- Wall mounted ferromagnetic detector: Accurately differentiates between both internal and external ferrous and non-ferrous metals, as only ferrous metals are of primary concern in the MRI environment. A proper scan takes 5-10 seconds as the subject makes turns in front of the device, with technologist/operator maintaining a safe social distance (Cat# E8810MA/MB)

MR Handheld Metal Detector

- Identifies ferrous and nonferrous metallic items in the MRI suite
- Slender design provides 360 degrees detection coverage, including tip pinpointing
- Easy to use with 1-touch button and 3-color LED display
- Immediate audio or visual/vibration alarm signals
- Powered by a standard 9V battery or a rechargeable battery is available (E8801BD)

Metrasens Ferroguard Ferromagnetic Detection Systems (FMDS)

Protecting patients and staff from projectile hazards is a priority in every MRI facility. Ferromagnetic detection systems are recommended by the ACR, which states in its 2020 Manual on MRI Safety that FMDS "...have been demonstrated to be highly effective as adjuncts to the MRI safety screening process..."¹ FMDS are also required by the Joint Commission through their adoption of the FGI Guidelines, 2018.²

The Metrasens Ferroguard FMDS product line includes:

¹ Manual on MR Safety. Published by the American College of Radiology, 2020.

² Guidelines for Design and Construction of Hospitals. Published by American Society for Healthcare Engineering, 2018.
